

# EEBus UC Technical Specification

## Monitoring of Grid Connection Point

Version 1.0.0 RC5

Cologne, 2020-07-21

### **EEBus Initiative e.V.**

Butzweilerhof Allee 4  
50829 Cologne  
GERMANY

Rue d' Arlon 25  
1050 Brussels  
BELGIUM

Phone: +49 221 / 47 44 12 - 20  
Fax: +49 221 / 47 44 12 - 1822

info@eebus.org  
[www.eebus.org](http://www.eebus.org)

District court: Cologne  
VR 17275

The EEBus concept was  
developed as part  
of E-Energy.

Supported by:  
  
Federal Ministry  
of Economics  
and Technology  
as the basis of a decision  
by the German Bundestag

**Terms of use for publications of EEBus Initiative e.V.****General information**

The specifications, particulars, documents, publications and other information provided by the EEBus Initiative e.V. are solely for general informational purposes. Particularly specifications that have not been submitted to national or international standardisation organisations by EEBus Initiative e.V. (such as DKE/DIN-VDE or IEC/CENELEC/ETSI) are versions that have not yet undergone complete testing and can therefore only be considered as preliminary information. Even versions that have already been published via standardisation organisations can contain errors and will undergo further improvements and updates in future.

**Liability**

EEBus Initiative e.V. does not assume liability or provide a guarantee for the accuracy, completeness or up-to-date status of any specifications, data, documents, publications or other information provided and particularly for the functionality of any developments based on the above.

**Copyright, rights of use and exploitation**

The specifications provided are protected by copyright. Parts of the specifications have been submitted to national or international standardisation organisations by EEBus Initiative e.V., such as DKE/DIN-VDE or IEC/CENELEC/ETSI, etc. Furthermore, all rights to use and/or exploit the specifications belong to the EEBus Initiative e.V., Butzweilerhof-Allee 4, 50829 Cologne, Germany and can be used in accordance with the following regulations:

The use of the specifications for informational purposes is allowed. It is therefore permitted to use information evident from the contents of the specifications. In particular, the user is permitted to offer products, developments and/or services based on the specifications.

Any respective use relating to standardisation measures by the user or third parties is prohibited. In fact, the specifications may only be used by EEBus Initiative e.V. for standardisation purposes. The same applies to their use within the framework of alliances and/or cooperations that pursue the aim of determining uniform standards.

Any use not in accordance with the purpose intended by EEBus Initiative e.V. is also prohibited.

Furthermore, it is prohibited to edit, change or falsify the content of the specifications. The dissemination of the specifications in a changed, revised or falsified form is also prohibited. The same applies to the publication of extracts if they distort the literal meaning of the specifications as a whole.

It is prohibited to pass on the specifications to third parties without reference to these rights of use and exploitation.

It is also prohibited to pass on the specifications to third parties without informing them of the authorship or source.

Without the prior consent of EEBus Initiative e.V., all forms of use and exploitation not explicitly stated above are prohibited.

## 132 **1 Scope of the document**

133 This document describes the Use Case "Monitoring of Grid Connection Point" (short-name: MGCP).  
134 Chapter 2 specifies the High-Level Use Case. Chapter 3 describes the technical solution for SPINE for  
135 this Use Case in detail. Within this document a top-down approach is used to derive the  
136 requirements for the technical solution from the High-Level description.

137

### 138 **1.1 References**

#### 139 **1.1.1 EEBUS documents**

140 **[UseCaseBaseSpecification]** EEBus\_UC\_TS\_UseCaseBaseSpecification.pdf

141 **[ProtocolSpecification]** EEBus\_SPINE\_TS\_ProtocolSpecification.pdf

142 **[ResourceSpecification]** EEBus\_SPINE\_TS\_ResourceSpecification.pdf

143 **[SHIP]** SHIP\_Specification\_v1.0.0.pdf

144

#### 145 **1.1.2 Normative references**

146 **[RFC2119]** IETF RFC 2119: 1997, Key words for use in RFCs to indicate requirement levels  
147 Please see section 1.3.1 for details.

148

### 149 **1.2 Terms and definitions**

#### 150 **AC**

151 Abbreviation for alternating current

#### 152 **Actor**

153 An Actor models a role within a Use Case definition (e.g. an energy manager or a heat pump).

#### 154 **CEM**

155 Abbreviation for Customer Energy Manager. The CEM is an energy manager located at the home or  
156 premises of the user or in a cloud application. The energy manager enables energy-optimized  
157 operation of the connected devices by harmonising energy demand and availability.

#### 158 **Configuration Appliance**

159 The Actor Configuration Appliance configures particular data of another Actor.

#### 160 **MGCP**

161 Monitoring of Grid Connection Point (short name of this Use Case)

#### 162 **Monitoring Appliance**

163 The Actor Monitoring Appliance evaluates particular data of another Actor.

#### 164 **pct**

165 Abbreviation for percentage

**166 PLF**

167 Abbreviation for power limitation factor

**168 Polling**

169 Mechanism where data is requested by the client periodically. Typically, polling needs to be  
170 repeated frequently by the client to increase the probability to notice all changes from a data server  
171 in time.

**172 PV**

173 Abbreviation for photovoltaic (system)

**174 Scenario**

175 Part of a Use Case. Splitting a Use Case into Scenarios helps to understand the Use Case more  
176 quickly. Some Scenarios are mandatory for a Use Case, whereas others may be recommended or  
177 optional.

**178 Specialization**

179 Reusable data collection for a specific functionality.

**180 SPINE**

181 **Smart Premises Interoperable Neutral-message Exchange: Technical Specification of EEBus Initiative**  
182 **e.V.**

183

**184 1.3 Requirements****185 1.3.1 Requirements wording**

186 The following keywords are used:

- 187 - SHALL
- 188 - SHALL NOT
- 189 - SHOULD
- 190 - SHOULD NOT
- 191 - MAY

192 Note: They apply only if written in capital letters.

193 For the meaning of the keywords, please refer to [RFC2119].

194

**195 1.3.2 Mapping of High-Level requirements**

196 Within the High-Level Use Case description, the following abbreviation is used:

197 [MGCP-xyz]

198 e.g.: [MGCP-007]

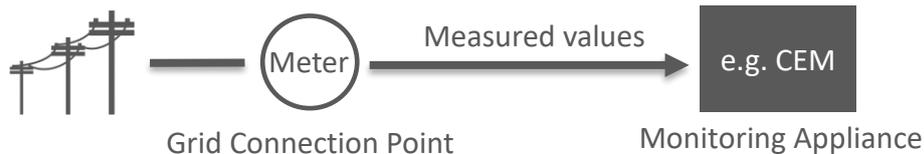

199 The abbreviation is used to mark High-Level requirements or rules of this Use Case with a unique  
200 number xyz. Those requirements are referenced throughout the technical solution to show how each  
201 High-Level requirement is realised in the technical part.

202

## 203 2 High-Level description

### 204 2.1 Introduction

205 The Monitoring Appliance monitors electrical measurands of the Grid Connection Point. A Grid  
206 Connection Point is defined as the point where the public electricity grid is connected to the internal  
207 grid of the premises, e.g. a house. The public grid as well as the internal grid are AC electricity grids.  
208 The Actor "Grid Connection Point" represents the measured values of the physical Electricity Grid  
209 Connection Point. The measurement is typically performed by an electrical smart meter or submeter.

210

211 *Figure 1: High-Level Use Case functionality overview*

212

213 *Added value:* This general-purpose Use Case is used for visualization or monitoring of electrical smart  
214 meter or submeter values at the Grid Connection Point. This is for example useful if PV power  
215 exceeds the maximum feed-in power. In this case (e.g.) an energy manager can offer energy to the  
216 connected devices at no cost with zero emission foot print by not power curtailing the PV system. In  
217 addition, the autarky rate will be increased.

218

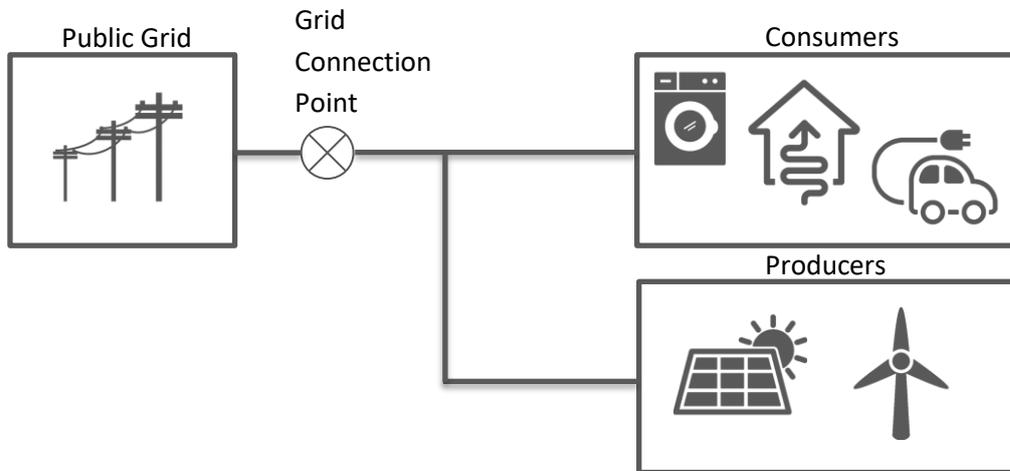

### 219 2.2 User Story as an example

220 A user wants his energy manager (CEM) to manage the energy demands of the premises' devices as  
221 best as possible. Therefore, the energy manager determines the energy consumption and production  
222 values as well as the cumulated energy since installation of the submeter at the Grid Connection  
223 Point of the home.

224

## 2.3 Detailed background information

This Use Case describes systems where electrical consumers and electrical producers in the home or premises of the user are connected to the internal electrical grid of the home or premises.

228

Figure 2: Location of the Grid Connection Point

230

The Electricity Grid Connection Point provides some or all following data points to the Monitoring Appliance:

- 233 - PV feed-in power limitation factor ( $PLF_{PV, \text{feed-in, max, pct}}$ )
- 234 - Momentary power consumption/production ( $P_{\text{grid, mom}}$ )
- 235 - Total feed-in energy ( $E_{\text{feed-in, total}}$ )
- 236 - Total consumed energy ( $E_{\text{grid, total}}$ )
- 237 - Momentary current consumption/production (phase-specific) ( $I_{\text{grid, mom}}$ )
- 238 - Voltage (phase-specific)
- 239 - Frequency

240

## 2.4 Actors

### 2.4.1 Monitoring Appliance

The Actor Monitoring Appliance (e.g. a CEM) may manage the home's appliances in such a way that lets the customer benefit from the energy optimized operation of the appliances or just visualize the values for the customer. In this Use Case the Monitoring Appliance retrieves power, energy, current or other measurement data provided by the Grid Connection Point's electrical smart meter or submeter.

Note: A CEM is a special kind of Monitoring Appliance or Configuration Appliance.

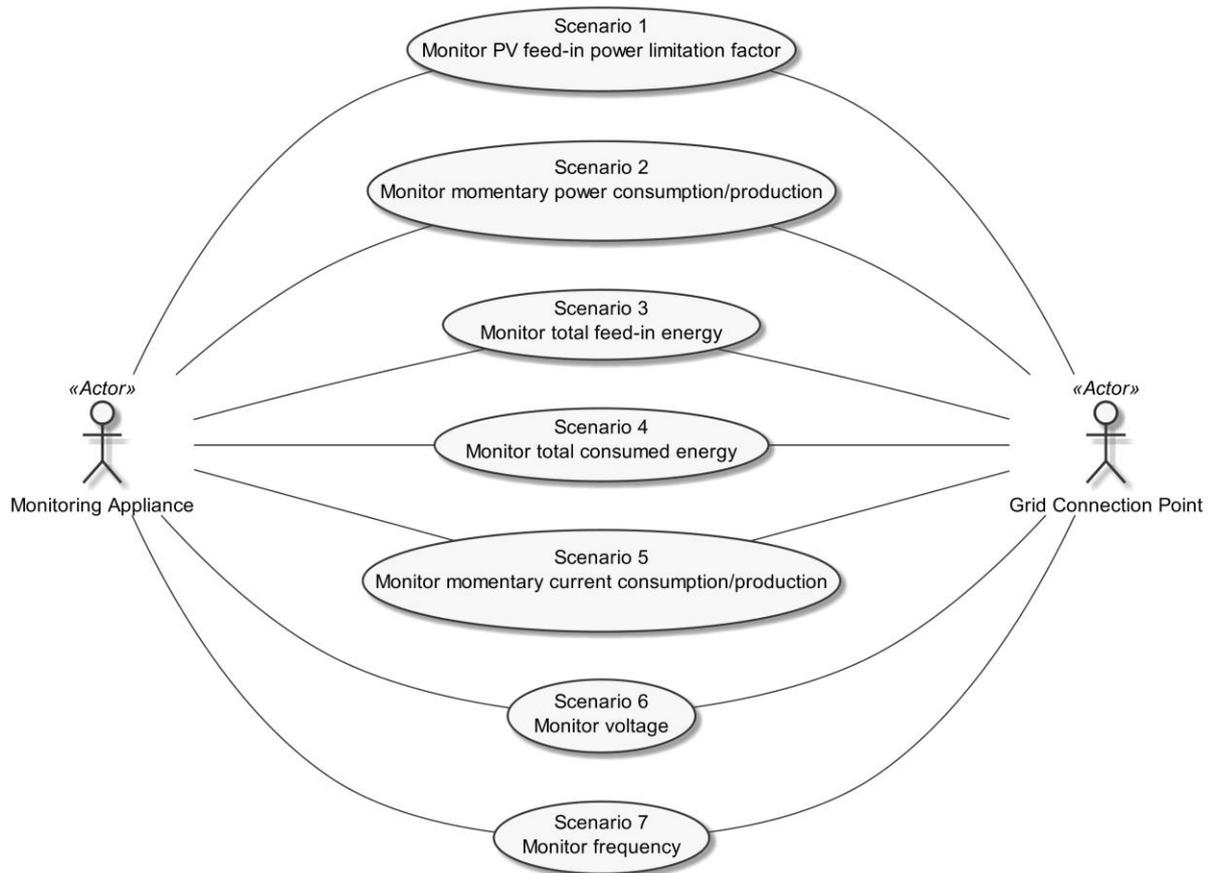

249

250 **2.4.2 Grid Connection Point**

251 This Actor is a Grid Connection Point, representing the point where the public electricity grid is  
 252 connected to the internal grid of the home or premises. An electrical smart meter or submeter  
 253 provides relevant measurement data to the home's energy manager.

254

255 **2.5 Scenarios**

256

257 *Figure 3: Scenario overview*

258

| Scenario number | Scenario name  | Monitoring Appliance | Grid Connection Point |
|-----------------|--|----------------------|-----------------------|
| 1               | Monitor PV feed-in power limitation factor ( $PLF_{PV, feed-in, max, pct}$ ) | O                    | O                     |
| 2               | Monitor momentary power consumption/production ( $P_{grid, mom}$ )           | R                    | M                     |
| 3               | Monitor total feed-in energy ( $E_{feed-in, total}$ )                        | O                    | M                     |
| 4               | Monitor total consumed energy ( $E_{grid, total}$ )                          | O                    | M                     |
| 5               | Monitor momentary current consumption/production ( $I_{grid, mom}$ )         | O                    | R                     |

|   |                   |   |   |
|---|-------------------|---|---|
| 6 | Monitor voltage   | O | O |
| 7 | Monitor frequency | O | O |

259 *Table 1: Scenario implementation requirement for Actors*

260 At least one of the Scenarios 2, 3 or 4 SHALL be supported by the Actor Monitoring Appliance.

261 Note: Scenario 5 is needed for phase-specific energy management only.

262

## 263 **2.5.1 Scenario 1 - Monitor PV feed-in power limitation factor ( $PLF_{PV, feed-in, max, pct}$ )**

### 264 **2.5.1.1 Description**

265 The Monitoring Appliance wants to be informed about the maximum power value allowed to be fed  
 266 into the public electricity grid from the internal grid of the premises, as percental value of the  
 267 cumulated nominal peak power of all electricity producing PV systems within the house or premises  
 268 [MGCP-001].

269 The following equation applies:  $P_{PV, feed-in} \leq PLF_{PV, feed-in, max, pct} * \sum P_{PV, AC, nom}$

270

### 271 **2.5.1.2 Conditions**

#### 272 **Triggering Event:**

273 The Actor Monitoring Appliance is interested in the PV feed-in power limitation factor of the Actor  
 274 Grid Connection Point.

#### 275 **Pre-condition:**

276 The Actor Monitoring Appliance does not know the PV feed-in power limitation factor of the Actor  
 277 Grid Connection Point.

278 The PV feed-in power limitation factor ( $PLF_{PV, feed-in, max, pct}$ ) and the nominal peak power of the  
 279 individual electricity producing PV system ( $P_{PV, AC, nom}$ ) SHALL have been configured by the installer or  
 280 the user according to the local regulations.

281 Note:  $P_{PV, AC, nom}$  is not part of this Use Case.

#### 282 **Post-condition:**

283 The Actor Monitoring Appliance knows the PV feed-in power limitation factor of the Actor Grid  
 284 Connection Point.

285

## 286 **2.5.2 Scenario 2 - Monitor momentary power consumption/production ( $P_{grid, mom}$ )**

### 287 **2.5.2.1 Description**

288 The Monitoring Appliance wants to be informed about the momentary value ([MGCP-007]) of the  
 289 electrical active power that is consumed from the public grid by local appliances or electrical power  
 290 that is fed into the public grid from the internal grid of the local premises [MGCP-002a]. This value is  
 291 the sum of all connected phases [MGCP-002b].

292

293 **2.5.2.2 Conditions**

294 **Triggering Event:**

295 The Actor Monitoring Appliance is interested in the momentary power consumption/production  
296 value of the Actor Grid Connection Point.

297 **Pre-condition:**

298 The Actor Monitoring Appliance does not know the momentary power consumption/production  
299 value of the Actor Grid Connection Point.

300 **Post-condition:**

301 The Actor Monitoring Appliance knows the momentary power consumption/production value of the  
302 Actor Grid Connection Point.

303

304 **2.5.3 Scenario 3 - Monitor total feed-in energy ( $E_{\text{feed-in, total}}$ )**

305 **2.5.3.1 Description**

306 The Monitoring Appliance wants to be informed about the cumulated electrical energy that was fed  
307 into the public grid from the internal grid of the premises [MGCP-003a]. This value is the sum of all  
308 connected phases [MGCP-003b]. The total feed-in energy only counts energy fed into the grid and is  
309 not reduced by energy consumed from the grid [MGCP-003c]. Only the latest value of the cumulated  
310 electrical energy is considered [MGCP-007].

311

312 **2.5.3.2 Conditions**

313 **Triggering Event:**

314 The Actor Monitoring Appliance is interested in the total feed-in energy of the Actor Grid Connection  
315 Point.

316 **Pre-condition:**

317 The Actor Monitoring Appliance does not know the total feed-in energy of the Actor Grid Connection  
318 Point.

319 **Post-condition:**

320 The Actor Monitoring Appliance knows the total feed-in energy of the Actor Grid Connection Point.

321

322 **2.5.4 Scenario 4 - Monitor total consumed energy ( $E_{\text{grid, total}}$ )**

323 **2.5.4.1 Description**

324 The Monitoring Appliance wants to be informed about the cumulated electrical energy that was  
325 consumed from the public grid by local appliances [MGCP-004a]. This value is the sum of all  
326 connected phases [MGCP-004b]. The total consumed energy only counts energy consumed from the  
327 grid and is not reduced by energy fed into the grid [MGCP-004c]. Only the latest value of the  
328 cumulated electrical energy is considered [MGCP-007].

329

330 **2.5.4.2 Conditions**331 **Triggering Event:**

332 The Actor Monitoring Appliance is interested in the total consumed energy of the Actor Grid  
333 Connection Point.

334 **Pre-condition:**

335 The Actor Monitoring Appliance does not know the total consumed energy of the Actor Grid  
336 Connection Point.

337 **Post-condition:**

338 The Actor Monitoring Appliance knows the total consumed energy of the Actor Grid Connection  
339 Point.

340

341 **2.5.5 Scenario 5 - Monitor momentary current consumption/production ( $I_{grid, mom}$ )**342 **2.5.5.1 Description**

343 The Monitoring Appliance wants to be informed about the momentary value ([MGCP-007]) of the  
344 current that is consumed from the public grid by local appliances or current that is fed into the public  
345 grid from the internal grid of the local premises [MGCP-005]. The value(s) are phase-individual (not  
346 the sum of all phases).

347

348 **2.5.5.2 Conditions**349 **Triggering Event:**

350 The Actor Monitoring Appliance is interested in the momentary current consumption/production  
351 value(s) of the Actor Grid Connection Point.

352 **Pre-condition:**

353 The Actor Monitoring Appliance does not know the momentary current consumption/production  
354 value(s) of the Actor Grid Connection Point.

355 **Post-condition:**

356 The Actor Monitoring Appliance knows the momentary current consumption/production value(s) of  
357 the Actor Grid Connection Point.

358

359 **2.5.6 Scenario 6 - Monitor voltage**360 **2.5.6.1 Description**

361 The actual phase-specific AC voltage values of the Actor Grid Connection Point are provided by this  
362 Scenario. Depending on the number of connected phases\*, the Grid Connection Point provides a  
363 different amount of individual values.

| Data point name      | Data point description<br>[High-Level requirement]   | Support indication | High-Level requirement |
|----------------------|--|--------------------|------------------------|
| AC voltage phase A-n | Voltage between phase A and neutral<br>[MGCP-061/1]. | R*                 | [MGCP-061]             |

|                      |   |    |  |
|----------------------|---|----|--|
| AC voltage phase B-n | Voltage between phase B and neutral [MGCP-061/2]. | R* |  |
| AC voltage phase C-n | Voltage between phase C and neutral [MGCP-061/3]. | R* |  |
| AC voltage phase A-B | Voltage between phase A and phase B [MGCP-061/4]. | O* |  |
| AC voltage phase B-C | Voltage between phase B and phase C [MGCP-061/5]. | O* |  |
| AC voltage phase C-A | Voltage between phase C and phase A [MGCP-061/6]. | O* |  |

364 *Table 2: Scenario 6 - Monitor voltage - Data point list*

365 \*: Only values related to the connected phases SHALL be delivered.

366 Note: If this Scenario is supported, at least one of the values stated above SHALL be supported.

367

368 **2.5.6.2 Conditions**369 **Triggering Event:**370 The Actor Monitoring Appliance is interested in the phase-specific AC voltage values of the Actor Grid  
371 Connection Point.372 **Pre-condition:**373 The Actor Monitoring Appliance does not know the phase-specific AC voltage values of the Actor Grid  
374 Connection Point.375 **Post-condition:**376 The Actor Monitoring Appliance knows the phase-specific AC voltage values of the Actor Grid  
377 Connection Point.

378

379 **2.5.7 Scenario 7 - Monitor frequency**380 **2.5.7.1 Description**

381 The frequency at the Grid Connection Point is provided by this Scenario.

| Data point name | Data point description                         | Support indication | High-Level requirement |
|-----------------|--|--------------------|------------------------|
| AC frequency    | Frequency, the Grid Connection Point measures. | M                  | [MGCP-071]             |

382 *Table 3: Scenario 7 - Monitor frequency - Data point list*

383

384 **2.5.7.2 Conditions**385 **Triggering Event:**

386 The Actor Monitoring Appliance is interested in the AC frequency of the Actor Grid Connection Point.

387 **Pre-condition:**

388 The Actor Monitoring Appliance does not know the AC frequency of the Actor Grid Connection Point.

389 **Post-condition:**

390 The Actor Monitoring Appliance knows the AC frequency of the Actor Grid Connection Point.

391

## 392 **2.6 Dependencies to other Use Cases**

393 None.

394

## 395 **2.7 Assumptions and Prerequisites**

- 396 - The Grid Connection Point is connected to an electrical smart meter or submeter which  
397 provides the relevant power, energy or current data for this Use Case.
- 398 - The home or premises the Grid Connection Point belongs to is mainly seen as an electrical  
399 consumer. Therefore, energy that is consumed by the home or premises from the public grid  
400 is seen as consumed energy at the Grid Connection Point and energy that is fed from the  
401 internal grid of the home or premises into the public grid is seen as produced energy. Hence,  
402 consumed energy from the public grid SHALL be described with positive values, grid feed in  
403 with negative values [MGCP-006].
- 404 - The Grid Connection Point represents a single connection from the home or premises to the  
405 public electricity grid.

406

## 407 **3 Technical SPINE solution**

### 408 **3.1 General rules and information**

#### 409 **3.1.1 Underlying technology documents**

410 This technical solution relies on the SPINE Resources Specification version 1.1.0  
411 [ResourceSpecification].

412 For interoperable connectivity this technical solution relies on:

- 413 - SPINE Protocol Specification version 1.1.0 [ProtocolSpecification] as application protocol.
- 414 - SHIP Specification version 1.0.0 [SHIP] as transport protocol.

415 Further applicable documents:

- 416 - EEBUS Use Case Base Specification version 1.0.0 [UseCaseBaseSpecification].

417

#### 418 **3.1.2 Use Case discovery rules**

419 Use Case discovery SHOULD be supported by each Actor. If Use Case discovery is supported the  
420 following rules SHALL apply:

- 421 - The string content for the Element "nodeManagementUseCaseData. useCaseInformation.  
422 useCaseSupport. useCaseName" within the Use Case discovery (please refer to  
423 [ProtocolSpecification]) SHALL be "monitoringOfGridConnectionPoint". The string content  
424 SHALL only be defined by this Use Case (regardless of the Use Case version).
- 425 - The string content of the Element "nodeManagementUseCaseData. useCaseInformation.  
426 actor" within the Use Case discovery (please refer to [ProtocolSpecification]) SHALL be set to  
427 the according value stated within the corresponding Actor's section.
- 428 - An Actor A that is implemented to support this Use Case specification SHALL set the Element  
429 "nodeManagementUseCaseData. useCaseInformation. useCaseSupport. useCaseVersion"  
430 within the Use Case discovery (please refer to [ProtocolSpecification]) to "1.0.0" (for details  
431 on the structure of the Use Case version number please refer to [UseCaseBaseSpecification]).
- 432 - If an Actor A supports multiple versions of this Use Case with the same major version  
433 number, only the highest one SHOULD be set within the Use Case discovery.
- 434 - If an Actor A finds a proper counterpart Actor B for this Use Case that supports multiple  
435 versions of this Use Case with the same major version number as supported by Actor A, the  
436 Actor A SHOULD evaluate from these versions of Actor B only the highest version number.
- 437 - If an Actor A supports multiple versions of this Use Case with different major version  
438 numbers, for each major version number only the highest version number SHOULD be set  
439 within the Use Case discovery.
- 440 - If an Actor A finds a proper counterpart Actor B for this Use Case that supports only versions  
441 with a major version number not implemented by Actor A, it still might be possible to run the  
442 Use Case or parts of the Use Case. Therefore, the Actor A should try to evaluate the Actor B  
443 as a valid partner for this Use Case.

444

### 445 3.1.3 Rules for "Content of Specialization..." tables and "Content of Function..." tables

#### 446 3.1.3.1 General presence indication definitions

447 Abbreviations for the presence indication of Elements listed in the tables are defined as follows:

| Abbreviation | Meaning     | Link to requirement keywords |
|--------------|-------------|------------------------------|
| M            | Mandatory   | SHALL                        |
| R            | Recommended | SHOULD                       |
| O            | Optional    | MAY                          |

448 *Table 4: Presence indication description*

449 An Actor MAY support Elements that are not listed in the tables. However, another Actor MAY ignore  
450 these Elements.

451 The presence indications "M", "R" and "O" are always meant relative to the respective parent  
452 Element. I.e. if a parent Element is optional ("O") and a child is mandatory ("M") the child Element  
453 can only be present if the parent Element is present as well.

454 Note: The indications and the aforementioned rules apply for "complete messages" (so-called "full  
455 function exchange", please refer to [ProtocolSpecification]). In contrast, the so-called "restricted  
456 function exchange" is designed to permit exchange of specific excerpts of data, i.e. fewer Elements  
457 than potentially available from the data owner (partially even not all "mandatory" Elements).

458

#### 459 3.1.3.2 Presence indications for "Content of Specialization..." tables

460 This section only defines rules for the client side.

461 Elements that are marked with "M" SHALL be supported by the client in case of readable as well as  
462 writeable data. This Element may be optional on the server side.

463 The following applies for readable data that is exchanged in a "read/reply" or "notify" operation:

- 464 - "R" means that the data SHOULD be supported by the client. In other words: If the server  
465 responds with the according Element, the client SHOULD be able to interpret the according  
466 Elements.
- 467 - "O" means that the data MAY be supported by the client. In other words: If the server  
468 responds with the according Element, the client MAY be able to interpret the according  
469 Elements.

470 The following applies for writeable data that is exchanged in a "write" operation:

- 471 - "R" means that the data SHOULD be written by the client.
- 472 - "O" means that the data MAY be written by the client.
- 473 - "F" means that the data SHALL NOT be written by the client.

474 The following applies for Elements that are not listed in the Actor section:

- 475 - In case of a received "reply" message: The client MAY ignore the Element.
- 476 - In case of a "write" operation to be created: The client MAY set the Element but SHALL  
477 consider that the server may ignore the Element.

478 - In case of a received "notify" message: The client MAY ignore the Element.

479 M, R or O may be combined with the suffix "(event)" to express that a supported Element or value  
480 only has to be supported during a certain event and hence does not need to be present at all times. If  
481 the event is not active the Element may be omitted or another value may be set. In most cases a  
482 High-Level requirement reference for the event is given in the rules column.

483

### 484 **3.1.3.3 Presence indications for "Content of Function..." tables**

485 This section only defines rules for the server side.

486 Elements that are marked with "M" SHALL be supported by the server in case of readable as well as  
487 writeable data. In case of writeable data (marked with "M \W") the server does not need to set the  
488 Element, because the Element is set only by the client.

489 The following applies for readable data that is exchanged in a "read/reply" or "notify" operation:

- 490 - "R" means that the data SHOULD be provided by the server.
- 491 - "O" means that the data MAY be provided by the server.
- 492 - "F" means that the data SHALL NOT be provided by the server.

493 The following applies for writeable data that is exchanged in a "write" operation:

- 494 - "R" means that the data SHOULD be supported. In other words: If the client writes the  
495 Element, the server SHOULD accept those messages and the contained Elements.
- 496 - "O" means that the data MAY be supported. In other words: If the client writes the Element,  
497 the server MAY accept those messages and the contained Elements.

498 The following applies for Elements that are not listed in the Actor section:

- 499 - In case of a received "read" request: The according Element MAY be set in the reply.
- 500 - In case of a received "write" operation: The server MAY ignore the Element.
- 501 - In case of a "notify" operation to be created: The server MAY set the Element.

502 Note: The server will only accept write operations if the result fulfils the server Function  
503 requirements (permitted values, e.g.). Write operations on Elements that are not writeable MAY  
504 result in an error message.

505 M, R or O may be combined with the suffix "(event)" to express that a supported Element or value  
506 only has to be supported during a certain event and hence does not need to be present at all times. If  
507 the event is not active the Element may be omitted or another value may be set. In most cases a  
508 High-Level requirement reference for the event is given in the rules column.

509

### 510 **3.1.3.4 Cardinality indications - Permitted number of occurrences**

511 A cardinality indication expresses constraints on the number of occurrences of a given Element or  
512 data set. In this section we use "X" as representation for such an Element or data set. Furthermore,  
513 "a" and "b" represent constraints. The following rules apply for the occurrence of "X" and its content  
514 related to a specific Scenario (see note underneath the list):

- 515 1. X
- 516 No cardinality indication.
- 517 2. X (a..b)
- 518 This means "X" SHALL occur at least "a" times and at maximum "b" times.
- 519 3. X (a..)
- 520 This means "X" SHALL occur at least "a" times and MAY occur more than "a" times.
- 521 4. X (..b)
- 522 This means "X" SHALL occur at maximum "b" times and MAY occur less than "b" times (even
- 523 zero occurrences are permissive).

524 Note: These rules apply only under consideration of presence indications and with regards to the  
 525 given Scenario or Function definition for this Use Case.

526 The following table is an example to explain this for two different placements.

| Scenario [...]:<br>M/R/O [W][VC] | Element   | Value  | [High Level<br>Mapping]<br>Element and value<br>rules |
|----------------------------------|---|--|---|
| 1: O                             | ...   |  | ..  |
| 2: M \W                          | xFeatureType. xListData. xData. [UC-002] (1..3) |  |   |
| 2: M \W                          | xId   | <g7> [<g8>]<br>[<g9>]                            | PRIMARY IDENTIFIER of x                               |
| 2: M \W                          | timePeriod                                      |  | ...   |
| 2: M \W                          | timePeriod. startTime                           | <xs:duration>                                    |   |
| 2: M \W                          | xSlot. (1..)                                    |  |   |
| 2: M \W                          | xSlot. xSlotId                                  |  | ...   |
| 2: M \W                          | xSlot. duration                                 | <xs:duration>                                    | ...   |
| 2: M \W                          | qId   | <h3>(-><g7>)<br>[<h4>(-><g8>)]<br>[<h5>(-><g9>)] | FOREIGN IDENTIFIER.                                   |
| ...                              | ...   | ...  | ...   |

527 *Table 5: Example table for cardinality indications*

528 The field

529 xFeatureType. xListData. xData. [UC-002] (1..3)

530 introduces a data pattern (required Elements and values) for "xData" instances used for Scenario 2.  
 531 The field itself specifies that such an "xData" instance SHALL occur at least 1 time and at maximum 3  
 532 times within "xListData" of Feature Type "xFeatureType". However, this holds only for Scenario 2 and  
 533 only if such "xData" are required. In this case, they are required, as the left field

534 2: M \W

535 denotes that this data set is mandatory for Scenario 2. The "Value" definition

536 <g7> [<g8>] [<g9>]

537 of the Element "xId" specifies that this is the reason for the cardinality: There must be at least one  
 538 "xData" instance and the corresponding "Value" placeholder is "<g7>" (see section 3.1.3.6 for the  
 539 definition of "Value" placeholders). The second and third instance of "xData" are optional, as the  
 540 corresponding placeholders "[<g8>]" and "[<g9>]" are put in brackets. Of course, the placeholders  
 541 SHALL then have distinct values.

542 The "Value" definition of the Element "qId" contains the expression

543 `<h3>(-><g7>) [<h4>(-><g8>)] [<h5>(-><g9>)]`

544 This means that the placeholder "<h3>" is to be used with "<g7>". Likewise, "<h4>" is associated with  
 545 "<g8>" and "<h5>" is associated with "<g9>".

546 Some Scenarios may require the association to two or more placeholders. As an example, we  
 547 consider an expression

548 `<t2>(-><v1>,<k3>)`

549 In this case the placeholder "<t2>" is to be used with the pair of "<v1>" and "<k3>".

550 The field

551 `xSlot. (1..)`

552 expresses that the Element "xSlot" SHALL occur at least one time within its "xData", but MAY occur  
 553 more than one time.

554 The remaining fields do not have an explicit cardinality indication.

555

### 556 **3.1.3.5 Writability and changeability indication**

557 In the same column where the presence indications are denoted, a mark is used to distinguish  
 558 between writeable, changeable or readable Elements:

- 559 - Elements that are marked with "\W" are written by a client and SHALL be writeable at the  
 560 server according to their presence indications. The client is not obliged to read the according  
 561 data. Received notifications do not need to be evaluated.
- 562 - Elements that are marked with "\C" are changed by a client and SHALL be changeable at the  
 563 server according to their presence indications. The client is not obliged to read the according  
 564 data. Received notifications do not need to be evaluated.
- 565 - Elements that are marked with "\RW" are read and written by a client and SHALL be  
 566 writeable and provided by the server according to their presence indications. Received  
 567 notifications SHALL be evaluated according to their presence indications.
- 568 - Elements that are marked with "\RC" are read and changed by a client and SHALL be  
 569 changeable and provided by the server according to their presence indications. Received  
 570 notifications SHALL be evaluated according to their presence indications.
- 571 - Elements that are not marked are only read by a client and SHALL be provided by the server  
 572 according to their presence indications. Received notifications SHALL be evaluated according  
 573 to their presence indications.

574 "Writeable" means that the Element and its value may be written by a client. This includes the  
575 possibility to modify (if the Element is already present), create (if the Element is not present yet), and  
576 delete the Element. The server SHALL adjust its Function according to the received "write" operation  
577 (unless the server cannot accept the "write" operation according to section 3.1.3.3).

578 "Changeable" means that the Element's value may be changed by a client. If the Element is not  
579 present at the resource before, it probably **cannot** be created by the client via the "write" operation.  
580 In this case the server MAY decline such a message.

581 Note: "\W" includes "\C" already.

582 Note: Depending on the resource a client might need to request a proper binding before the server  
583 accepts a "write" operation.

584

### 585 **3.1.3.6 Rules for "Value" placeholders**

586 If the "Value" column contains values for identifiers they are always written as placeholder variable  
587 (i.e. placeholder for the real value of the Element) in angle brackets, e.g. <x1>. This means all  
588 Elements used within a Scenario that have <x1> (e.g.) in the "Value" column SHALL have set the same  
589 content of the Element.

590 A placeholder variable <xY> (e.g. <x1>) for Scenario A is, in general, independent from a placeholder  
591 variable <xY> for Scenario B. However, the server SHOULD combine datasets if possible. If there is  
592 the requirement that the same value SHALL be used for different stated Scenarios, the according  
593 Scenario numbers in column "Scenario" are put in curly brackets (" {...}") for the Element containing  
594 the variable. Several curly bracket groups may exist.

595 Example: An Element with variable <x1> contains in the column "Scenario" the following expression:  
596 {2, 3}, {4, 5}

597 This means that Scenario 2 and 3 SHALL use the same value for the variable (e.g. 5) as well as  
598 Scenario 4 and 5 SHALL use the same value for the variable (e.g. 12). The variable values MAY differ  
599 between the two groups ({2, 3} and {4, 5}).

600

### 601 **3.1.3.7 Rules for content of "Value" column**

602 For a given Scenario the "Value" column may restrict the permitted content of a Function's Element  
603 to one or more particular values. This means that Elements with values deviating from the restriction  
604 (i.e. from the permitted values) do not belong to the respective Scenario and need to be considered  
605 as if the Element is not set. If more than one particular value is permitted for an Element the values  
606 are in a single line each.

607 If a presence indication is set for the value (in an additional column before the value) the following  
608 rules SHALL be applied:

- 609 - "M" means that the value SHALL be supported. This means the value needs to be set at a  
610 certain point in time (depending on the value rules) or for a certain Element within a list  
611 entry.
- 612 - "R" means that the value SHOULD be supported.

613 - "O" means that the value MAY be supported.

614 If all possible values of a given mandatory Element are optional or recommended and this Element is  
615 used for the purpose of the respective Scenario, one of the values SHALL be set. If all possible values  
616 of a given optional or recommended Element are optional or recommended, this Element MAY  
617 contain also other values, but then this Element SHALL NOT be considered as part of the respective  
618 Scenario.

619 M, R or O may be combined with the suffix "(event)" to express that a supported value only has to be  
620 supported during a certain event and hence does not need to be present at all times. If the event is  
621 not active another value may be set. In most cases a High-Level requirement reference for the event  
622 is given in the rules column.

623 If no presence indication is set for the value, the following rules SHALL be applied:

- 624 - In case of Elements where the server may set or change an Element on its own (see section  
625 3.1.3.5):
  - 626 ○ within the tables in the "Server data - Resources" sections:
    - 627 ▪ the server SHALL support at least one of the listed values.
  - 628 ○ within the tables in the "Client data - Specializations" sections:
    - 629 ▪ the client SHALL support all listed values.
- 630 - In case of Elements that are writable or changeable (see section 3.1.3.5):
  - 631 ○ within the tables in the "Server data - Resources" sections:
    - 632 ▪ the server SHALL support all listed values.
  - 633 ○ within the tables in the "Client data - Specializations" sections:
    - 634 ▪ the client SHALL support at least one of the listed values.

635 Depending on the Element, different values may be used during runtime. If this is the case, those  
636 rules are described within the value rules.

637 If a value is placed in parenthesis, the corresponding value is a recommendation. The actual value  
638 MAY deviate from this, e.g. "(1024)".

639

### 640 **3.1.3.8 General information on how to interpret the "Content of Function..." and "Content of** 641 **Specialization..." tables**

642 Within the "Client data - Specializations" sections each Specialization is described in an own sub-  
643 section with the name "Specialization "<name of the Specialization>" (e.g. "Specialization  
644 "Measurement\_GridFeedInEnergy"). It contains only one table that includes all Elements needed for  
645 this Specialization. The different Functions are mentioned in a continuous row, highlighted with grey  
646 background colour. This row contains the following parts:

647 <Feature Type>. <Function>.[ <list entry instance name>.]

648 The <list entry instance name> is only included if the <Function> is a list-based Function. An example  
649 could be:

650 DeviceConfiguration. deviceConfigurationKeyValueDescriptionListData.  
651 deviceConfigurationKeyValueDescriptionData.

652 In the following rows, only the names of the Elements are stated, without the prefix described above.

653

654 Within the "Server data - Resources" sections each Feature Type is described in an own sub-section  
 655 with the name "Feature Type "<name of the Feature Type>" (e.g. "Feature Type "Measurement"").  
 656 It contains sub-sections for each Function named "Function "<name of the Function>" (e.g.  
 657 "Function "measurementListData""). These sections contain one table with all Elements needed for  
 658 this resource. The list entries are mentioned in a continuous row, highlighted with grey background  
 659 colour. This row contains the following parts:

660 <Feature Type>. <Function>.[ <list entry instance name>.]

661 The <list entry instance name> is only included if the <Function> is a list-based Function. An example  
 662 could be:

663 Measurement. measurementDescriptionListData. measurementDescriptionData.

664 In the following rows, only the names of the Elements are stated, without the prefix described above.

665

666 For both kinds of tables, the following applies:

667 - Parent Elements are marked with a dot at the end of the name:

668 <parent Element>.

669 E.g.:

670 value.

671 - If there are sub-Elements, they are described in own rows with the name of the parent  
 672 Element as prefix, separated by a dot and a blank space:

673 <parent Element>. <sub-Element>

674 E.g.:

675 value. number

676

### 677 3.1.4 Rules for "Feature Types and Functions..." tables

#### 678 3.1.4.1 Presence indications for "Feature Types and Functions..." tables

679 The following presence indications are used:

| Abbreviation | Meaning     | Link to requirement keywords |
|--------------|-------------|------------------------------|
| M            | Mandatory   | SHALL                        |
| R            | Recommended | SHOULD                       |
| O            | Optional    | MAY                          |

680 *Table 6: Presence indication of Feature Types and Functions support*

681 If at least one Function of a Feature has the presence indication "M", it is mandatory to support the  
 682 Feature.

683

684 **3.1.4.2 Rules for "Possible operations" column**

685 Within the "Feature Types and Functions..." tables the column "Possible operations" state whether  
686 the Function is read- or writeable (as defined in the detailed discovery mechanism, see  
687 [ProtocolSpecification]).

688 If the "partial" concept (also called "restricted function exchange") SHALL be supported, the  
689 following notation is used (separated for read and write access):

690 read (M). partial (M)

691 write (M). partial (M)

692 If the "partial" concept SHOULD be supported, the following notation is used:

693 read (M). partial (R)

694 write (M). partial (R)

695 If the "partial" concept MAY be supported, the following notation is used:

696 read (M). partial (O)

697 write (M). partial (O)

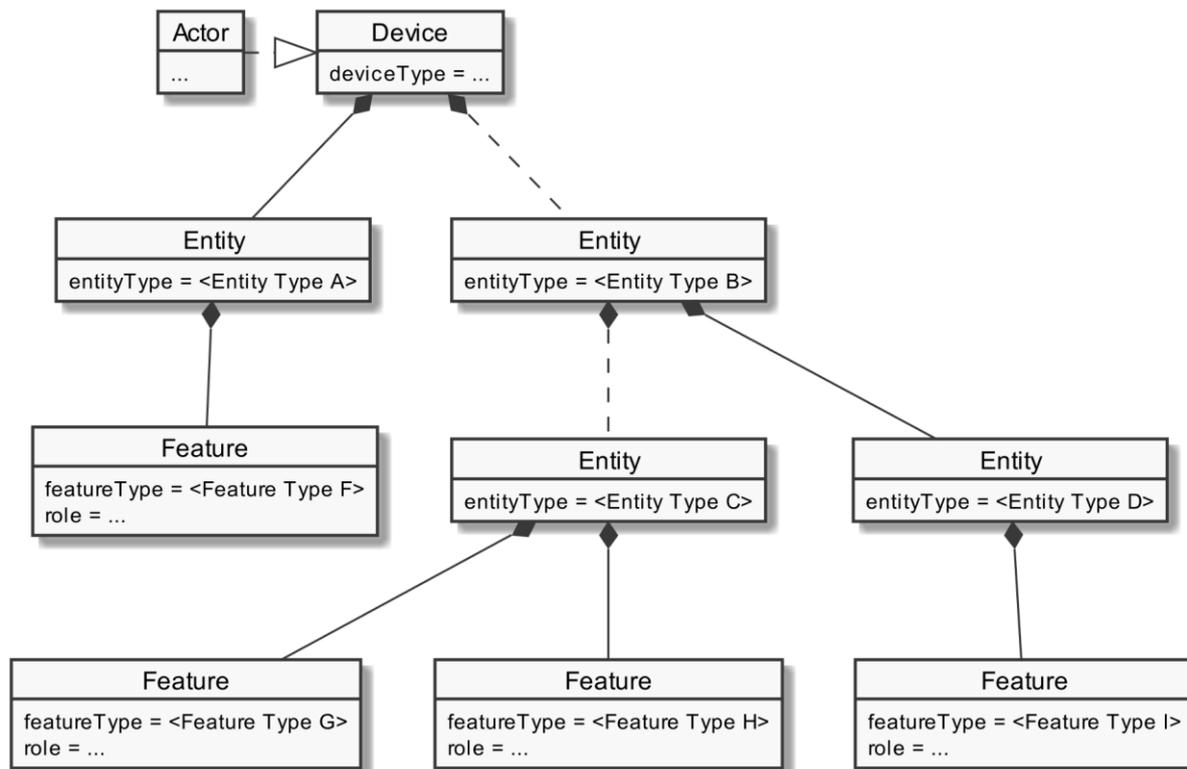

698 The server can decide whether a notification is submitted complete or partial (as described in  
699 [ProtocolSpecification]) if not defined differently within this Use Case Specification.

700

701 **3.1.5 "Actor ... overview" diagram rules**

702 Within the "Actor [...] overview" diagrams in the "Actors" sub-sections the complete functionality of  
703 this Use Case is provided, including optional Scenarios. Which Scenarios are optional can be found in  
704 Table 1. The Actor MAY have more functionality implemented than needed for this Use Case.

705 For the following Actor overview example, a brief description of the graphical symbols will be  
706 described.

707

708 *Figure 4: Actor overview example*

709 The solid lines in the figure represent an immediate parent-childhood relation: The Entity with  
 710 "<Entity Type A>" is a direct child of "Device". The Entity with "<Entity Type D>" is a direct child of the  
 711 Entity with "<Entity Type B>". All Features are immediate child of the respective Entity.

712 The dashed lines in the figure express that there MAY be additional Entities between the shown  
 713 Entities: A vendor's implementation MAY have one or more Entities between "Device" and the Entity  
 714 with "<Entity Type B>". Likewise, a vendor's implementation MAY have one or more Entities between  
 715 the Entity with "<Entity Type B>" and the Entity with "<Entity Type C>".

716

### 717 3.1.6 Specializations

718 Within the "Actors" sub-sections Specializations are referenced. A Specialization describes a dataset  
 719 necessary to fulfil the specific requirements of a High-Level Use Case and its Scenarios. Often data  
 720 from multiple different Features and Functions are needed to fulfil the requirements. Therefore, a  
 721 Specialization defines a dataset that may encompass multiple related Functions from one or more  
 722 different Features.

723 As different Use Cases sometimes share similar requirements, Specializations are also important  
 724 from a re-usability perspective. This approach is used to improve consistency across Use Cases and  
 725 avoid multiple variances of basically the same dataset. This is especially important in the case when  
 726 an implementation supports multiple Use Cases. E.g. if a power measurement is necessary in two  
 727 different Use Cases, both Use Cases could define slightly different datasets. In this case the server as  
 728 well as the client functionality would have to implement both variances if both Use Cases are  
 729 supported. This means, depending on the number of Use Cases, two or more datasets need to be

730 generated, transmitted and stored instead of one. Therefore, already existing Specializations  
731 specified within [UseCaseBaseSpecification] are used in this Use Case to avoid such problems.

732 If a Feature server can provide the data of a Specialization, the data does not necessarily always need  
733 to be available at the Feature server. There might be situations where the user deactivates a Use  
734 Case. There may also be other reasons why Use Case data cannot be provided currently. Therefore, a  
735 client always needs to be subscribed (as described in section 3.3.4) on the corresponding dataset to  
736 stay updated.

737 The SPINE resource description given in the "SPINE resources of the Actor" sections are derived from  
738 the Specializations given in the Actor's overview diagram. Please refer to [UseCaseBaseSpecification]  
739 for a detailed description of all Specializations.

740

### 741 **3.1.7 Order of messages within the sequence diagrams**

742 There are several sequence diagrams in this document describing message flows. The order of the  
743 messages SHOULD be kept by the communications partners, but there might be cases where a  
744 different order makes sense. The communications partners SHALL be able to handle the Scenario  
745 functionalities even if the messages are transmitted in a different order by the other Actor(s). The  
746 sequence diagrams can be seen as examples.

747

### 748 **3.1.8 Further information and rules**

#### 749 **3.1.8.1 Frequently used Element rules for the Resource and Specialization tables**

750 This section serves as a collection of rules frequently used by Resource and Specialization tables of  
751 the subsequent sections. Each rule applies only where referenced explicitly in the tables.

752 Note: The purpose of this collection is just to reduce the size of the tables. As such, no rule has a  
753 meaning without a reference indicating the required rule. A reference looks like "See [Measurement  
754 value rules]", e.g.

755

#### 756 **[Measurement value rules]:**

757 SHALL be set if a value is available. Otherwise the whole list entry SHALL be omitted or the Element  
758 *valueState* SHALL be set to "error".

759 If *valueState* is set to "error", but *value* is set, the content of *value* SHALL be ignored.

760 If *valueState* is set to "outOfRange", but *value* is set, the content of *value* SHALL be interpreted as  
761 being out of range.

762 If *valueState* is set to "outOfRange", *measurementConstraintsListData.valueRangeMax* is set and  
763 *value* is equal or bigger than *valueRangeMax*, *value* SHALL be interpreted as above *valueRangeMax*.

764 If *valueState* is set to "outOfRange", *measurementConstraintsListData.valueRangeMin* is set and  
765 *value* is equal or smaller than *valueRangeMin*, *value* SHALL be interpreted as below *valueRangeMin*.

766 If set, *measurementDescriptionListData.measurementType* SHALL be set, too.

767

768 **[Value state rules]:**

769 The Element valueState SHALL be set by the server if its content differs from "normal". This means, if  
770 the state of the value is "outOfRange" or "error" this SHALL be denoted in the valueState Element. A  
771 client SHALL always consider the content of valueState, if set. If omitted, a value of "normal" is  
772 assumed.

773

774 **[Scaled number rules]:**

775 The sub-Elements "number" and "scale" represent a value according to the following formula:  
776  $\text{number} * 10^{\text{scale}}$

777

778 **3.1.8.2 Applied sign convention**

779 Throughout the whole Use Case the "load convention" (i.e. "passive sign convention") is applied for  
780 measurement values [MGCP-006]. This means measured electrical current, active power and  
781 exchanged energy are expressed with positive values in case of energy consumption whereas  
782 negative values are used in case of energy production. Voltages are measured independent of the  
783 energy direction.

784

785 **3.1.8.3 Further rules**

786 A server SHOULD NOT add or remove Entities and Features used within this Use Case during runtime  
787 in the detailed discovery.

788

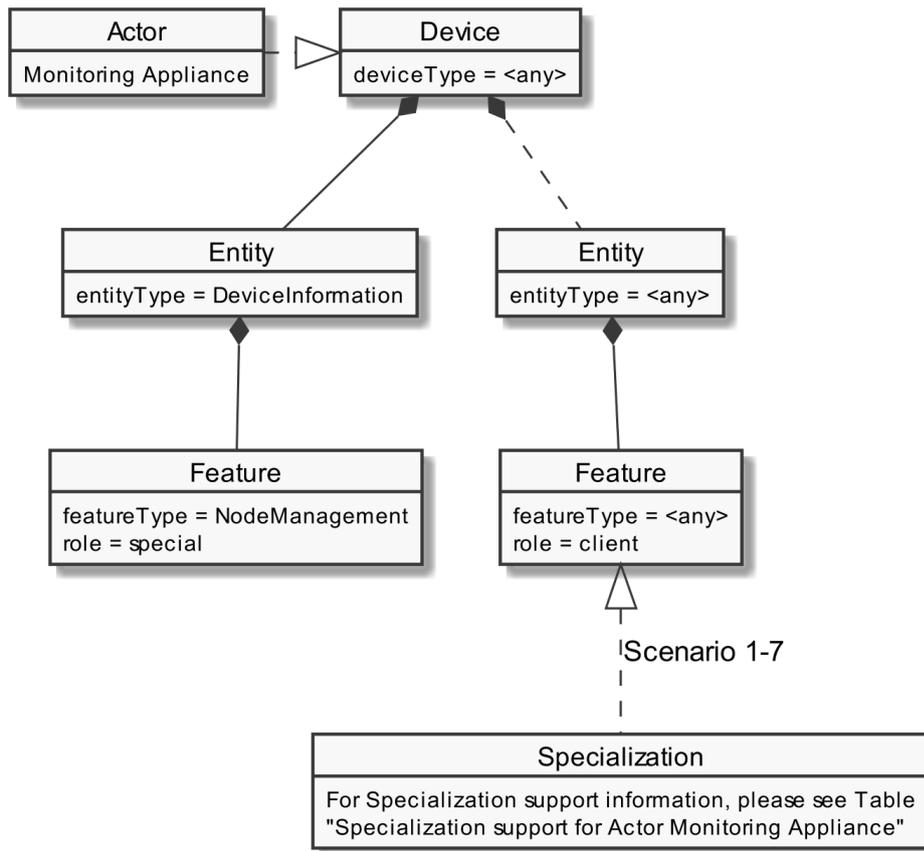

789 **3.2 Actors**

790 **3.2.1 Monitoring Appliance**

791 **3.2.1.1 Resource hierarchy**

792 If Use Case discovery is supported (see section 3.1.2) this Actor SHALL be denoted as  
793 "MonitoringAppliance" in the Element "nodeManagementUseCaseData.useCaseInformation.actor".

794 The following diagram provides an overview of the Actor Monitoring Appliance resource hierarchy.

795

796 *Figure 5: Actor "Monitoring Appliance" overview*

797 The ""Actor ... overview" diagram rules" section describes how to interpret the diagram above. See  
 798 the "Specializations" section for more information regarding the Specializations given in the diagram  
 799 above.

800 Note: The entityType "DeviceInformation" with the featureType "NodeManagement" is required by  
 801 the SPINE protocol and therefore SHALL be supported. Both types are added in the figure for  
 802 completeness but are not directly linked to the Use Case.

803 The Use Case specific data follows behind any entityType. The Specializations represent the Scenario  
 804 specific data that has to be supported for each Scenario and are realized through the according  
 805 featureTypes.

806 If a Specialization is connected to a Feature with the role "client", the Actor has a client role for this  
 807 data. This means the Actor accesses the data set described by the Specialization at a corresponding  
 808 server Feature. Further details are described in the sub-section "Client data - Specializations".

809 If a Specialization is connected to a Feature with the role "server", the Actor has the server role for  
 810 this data. This means the Actor must provide the corresponding data set of the Specialization on its  
 811 Features. Further details are described in the sub-section "Server data - Resources".

| Specialization name                          | Scenario | Described in table |
|--|----------|--------------------|
| DeviceConfiguration_PvCurtailmentLimitFactor | 1        | Table 8            |
| Measurement_AcPowerTotal                     | 2        | Table 9            |
| Measurement_GridFeedInEnergy                 | 3        | Table 10           |

|                                    |   |          |
|------------------------------------|---|----------|
| Measurement_GridConsumptionEnergy  | 4 | Table 11 |
| Measurement_GridCurrent            | 5 | Table 12 |
| Measurement_AcVoltagePhaseSpecific | 6 | Table 13 |
| Measurement_AcFrequency            | 7 | Table 14 |

812 *Table 7: Specialization support for Actor Monitoring Appliance*

813

814 **3.2.1.2 Server data - Resources**

815 As this Actor has only client functionality, no resources are described within this section.

816

817 **3.2.1.3 Client data - Specializations**818 **3.2.1.3.1 Topic "DeviceConfiguration"**819 **3.2.1.3.1.1 Specialization "DeviceConfiguration\_PvCurtailmentLimitFactor"**

| Scenario [...]:<br>M/R/O [W]/[C] | Element  | Value                      | [High Level<br>Mapping]<br>Element and<br>value rules  |
|----------------------------------|--|----------------------------|--|
| 1: M                             | DeviceConfiguration.deviceConfigurationKeyValueDescriptionListData.<br>deviceConfigurationKeyValueDescriptionData. |                            |  |
| 1: M                             | keyId  | <k1#(1..1)>                | SHALL be set as PRIMARY IDENTIFIER.  |
| 1: M                             | keyName  | "pvCurtailmentLimitFactor" | The corresponding value SHALL be in the range from 0 to 100.   |
| 1: M                             | valueType  | "scaledNumber"             |  |

843 *Table 14: Content of Specialization "Measurement\_AcFrequency" at Actor Monitoring Appliance*

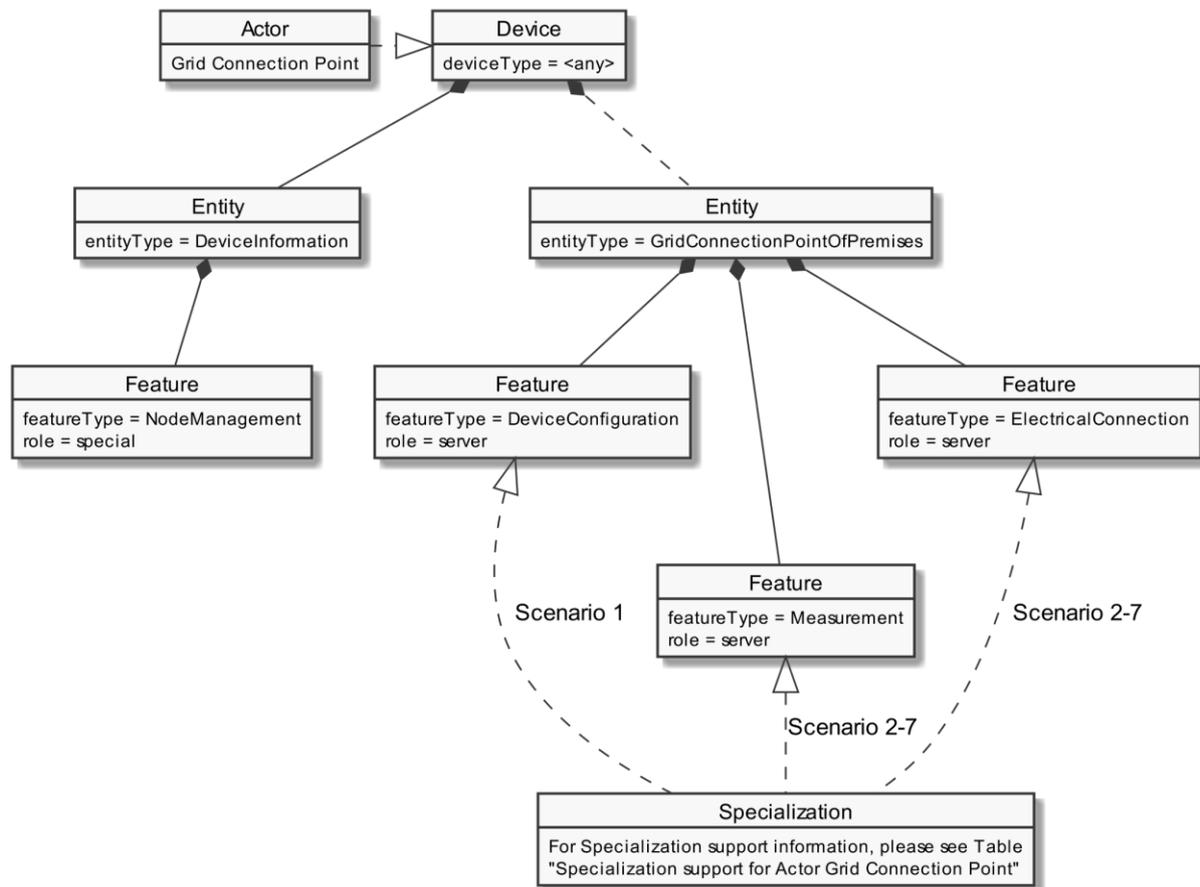

844

845 **3.2.2 Grid Connection Point**846 **3.2.2.1 Resource hierarchy**

847 If Use Case discovery is supported (see section 3.1.2) this Actor SHALL be denoted as

848 "GridConnectionPoint" in the Element "nodeManagementUseCaseData. useCaseInformation. actor".

849 The following diagram provides an overview of the Actor Grid Connection Point resource hierarchy.

850

851 *Figure 6: Actor "Grid Connection Point" overview*

852 The ""Actor ... overview" diagram rules" section describes how to interpret the diagram above. See  
 853 the "Specializations" section for more information regarding the Specializations given in the diagram  
 854 above.

855 The device type can be freely chosen, but it is recommended to use "ElectricitySupplySystem".

856 Note: The entityType "DeviceInformation" with the featureType "NodeManagement" is required by  
 857 the SPINE protocol and therefore SHALL be supported. Both types are added in the figure for  
 858 completeness but are not directly linked to the Use Case.

859 The Use Case specific data follows behind the entityType "GridConnectionPointOfPresmises". The  
 860 Specializations represent the Scenario specific data that has to be supported for each Scenario and  
 861 are realized with the according featureTypes.

862 If a Specialization is connected to a Feature with the role "client", the Actor has a client role for this  
 863 data. This means the Actor accesses the data set described by the Specialization at a corresponding  
 864 server Feature. Further details are described in the sub-section "Client data - Specializations".

865 If a Specialization is connected to a Feature with the role "server", the Actor has the server role for  
 866 this data. This means the Actor must provide the corresponding data set of the Specialization on its  
 867 Features. Further details are described in the sub-section "Server data - Resources".

869

870 **3.2.2.2 Server data - Resources**

871 3.2.2.2.1 Overview

872 Behind the entityType "GridConnectionPointOfPremises" the Actor Grid Connection Point SHALL  
873 offer the Feature Types and Functions given in the table below.

| Feature Type        | Scenario:<br>M/R/O | Function                                       | Possible operations      |
|---------------------|--------------------|--|--------------------------|
| DeviceConfiguration | 1: M               | deviceConfigurationKeyValueDescriptionListData | read (M).<br>partial (R) |
|                     | 1: M               | deviceConfigurationKeyValueListData            | read (M).<br>partial (R) |
| Measurement         | 2: M               | measurementDescriptionListData                 | read (M).<br>partial (R) |
|                     | 3: M               |  |                          |
|                     | 4: M               |  |                          |
|                     | 5: M               |  |                          |

|                      |  |  |                          |
|----------------------|--|--|--------------------------|
|                      | 6: M<br>7: M                                 |  |                          |
|                      | 2: R<br>3: R<br>4: R<br>5: R<br>6: R<br>7: R | measurementConstraintsListData                   | read (M).<br>partial (R) |

874 *Table 16: Feature Types and Functions used within this Use Case by the Actor Grid Connection Point*

875 For each of these Feature Types the following rule applies: There SHALL be at maximum one Feature  
876 with the Feature Type in the Entity.

877 Note: As a consequence of the previous rule, an implementation may need to have Feature data  
878 from different Scenarios/Specializations or even Use Cases in a given Feature.

879 The Scenario number shows in which Scenarios the Grid Connection Point acts as server and which  
880 Feature Types and Functions are relevant in each Scenario.

881 A detailed definition of the Elements and values that shall be supported in each Function is given in  
882 the following sub-sections.

883 Note: If in the table above "partial" read is not mentioned or is only optional, it still might be  
884 mandatory to support partial notifications. The details of "partial" support are described within the  
885 Scenario sections.

886 Note: The presence indications stated above are meant relative to the ones of the according Scenario  
887 stated in Table 1. I.e. if a Scenario is optional ("O") and a Feature Type is mandatory ("M") the  
888 Feature Type need only be supported if the Scenario is supported, too.

889 Note: Further Features MAY be implemented on the same Entities, as well as further Functions MAY  
890 be implemented in the used Entities.

891

892 3.2.2.2.2 Feature Type "DeviceConfiguration"

893 3.2.2.2.2.1 Function "deviceConfigurationKeyValueDescriptionListData"

| Scenario [...]:<br>M/R/O [\W][C] | Element   | Value                      | [High Level<br>Mapping]<br>Element and<br>value rules        |
|----------------------------------|---|----------------------------|--|
| 1: M                             | DeviceConfiguration. deviceConfigurationKeyValueDescriptionListData.<br>deviceConfigurationKeyValueDescriptionData. |                            |  |
| 1: M                             | keyId   | <k1#{1..1}>                | SHALL be set as PRIMARY IDENTIFIER.                          |
| 1: M                             | keyName   | "pvCurtailmentLimitFactor" | The corresponding value SHALL be in the range from 0 to 100. |
| 1: M                             | valueType   | "scaledNumber"             |  |
| 1: M                             | unit  | "pct"                      | The unit SHALL be applied to the value of the key.           |

917

### 918 3.2.2.3 Client data - Specializations

919 As this Actor has only server functionality, no Specializations are described within this section.

920

## 921 3.3 Pre-Scenario communication

### 922 3.3.1 General information

923 The Pre-Scenario communication is needed if a client does not know the corresponding addresses on  
924 the server or if the required subscriptions or bindings are not active. In this case certain general  
925 communication mechanisms SHALL be used within SPINE:

- 926 a) Detailed discovery: allows to discover resource addresses.  
927 b) Binding: allows to bind to resource address, which is frequently necessary to obtain write  
928 privileges.  
929 c) Subscription: allows to subscribe to resource addresses, which is necessary to receive  
930 unsolicited notifications if a resource changes during runtime.

931 It is possible to combine those steps for multiple Scenarios or also multiple Use Cases:

- 932 - E.g. if multiple Scenarios in multiple Use Cases use the same Feature, only one subscription  
933 needs to occur.  
934 - E.g. a complete detailed discovery or a subscription to the NodeManagement Feature needs  
935 to occur only once for all Use Cases.

936 Depending on which Entity, Feature and Functions are used within a Scenario the payload of the  
937 corresponding messages may slightly differ, but the basic principles and messages used stay the  
938 same.

939 The subsequent messages SHALL be exchanged for those parts that have not already been performed  
940 since the current connection is established or if those parts are outdated for another reason (e.g. if  
941 the detailed discovery is needed, but the bindings and subscriptions are still active from a previous  
942 connection only the detailed discovery messages need to be exchanged). If all Pre-Scenario  
943 communication parts are up-to-date, this section MAY be skipped, and the implementation can  
944 proceed as described in the corresponding "Scenario communication" sections.

945 After the connection is re-established (e.g. due to a power loss or a firmware update) the Pre-  
946 Scenario communication SHALL be performed as well. There may be circumstances where messages  
947 from the Pre-Scenario communication may be exchanged again.

948 Often the necessary messages of different Scenarios can be combined, so that only one single  
949 message is needed instead of multiple messages for the different Scenarios. This also is the case for  
950 the Pre-Scenario communication. In most cases only one "read" operation on the detailed discovery  
951 is necessary, as well as only one subscription request or binding request is needed for each Feature.  
952 Often multiple Scenarios within a Use Case access the same Feature, so only one subscription or  
953 binding is necessary.

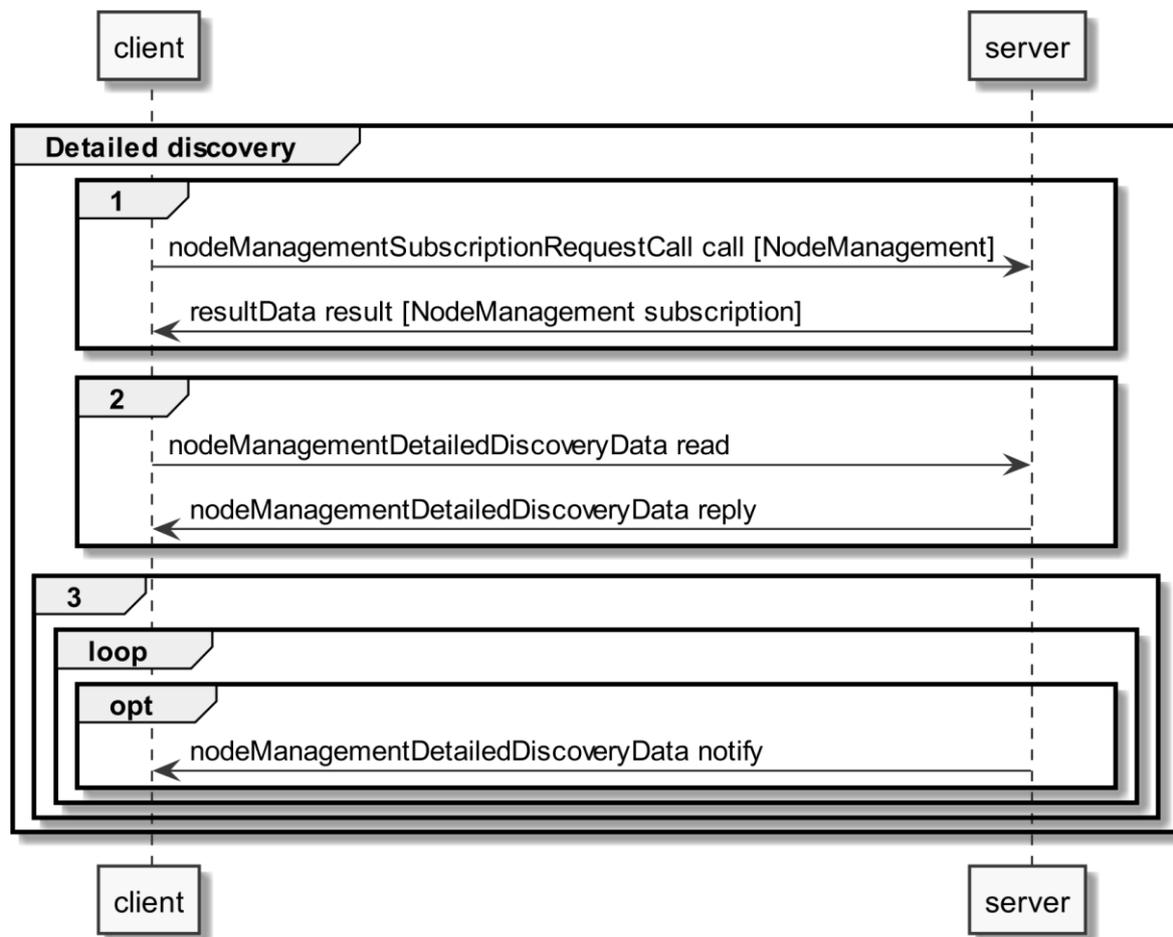

954

### 955 **3.3.2 Detailed discovery**

956 For the functionality where a client already has current detailed discovery information (i.e.  
957 independent of this Use Case or any Scenario of it) the remainder of this section SHOULD be skipped.

958 Otherwise, the following procedure SHALL be performed in the given order:

- 959 1. If a client is not subscribed to the primary NodeManagement instance, the client SHALL  
960 acquire a subscription according to the figure provided within this sub-section.
- 961 2. A client SHALL read the detailed discovery information according to the figure provided  
962 within this sub-section. It SHALL keep the received information as far as it concerns  
963 mandatory and supported optional Entity Types, Feature Types and Functions of this Use  
964 Case that are needed by the client. This means that a client may choose how to store the  
965 necessary information. E.g. a client Actor can store the information how to address the  
966 necessary Features of the implemented Scenarios but may discard the Entity information.
- 967 3. If and as long as a client has a subscription to the detailed discovery information of an Actor  
968 and receives proper notifications, it SHALL consider (i.e. integrate into the kept detailed  
969 discovery information) the received information as far as it concerns mandatory and  
970 supported optional Entity Types, Feature Types and Functions of this Use Case.

971

972 *Figure 7: Pre-Scenario communication - Detailed discovery sequence diagram*

973 If the "nodeManagementDetailedDiscoveryData read" fails, the client SHOULD retry to read the  
 974 detailed discovery information until the "nodeManagementDetailedDiscoveryData reply" message  
 975 was received successfully.

976 If all functionality is present at all times: The "nodeManagementDetailedDiscoveryData reply"  
 977 message contains at least the mandatory Entities and Features given in the "Actor [...] overview"  
 978 diagrams as well as the used Functions and their "possible operations" described in section 3.2 and  
 979 its sub-sections.

980 If functionality is added or removed dynamically: The "nodeManagementDetailedDiscoveryData  
 981 reply" message does not need to contain all mandatory Entities and Features given in the "Actor [...]  
 982 overview" diagrams as well as all needed Functions and their "possible operations" described in  
 983 section 3.2 and its sub-sections. However, as soon as the functionality is available it will be  
 984 announced via a "nodeManagementDetailedDiscoveryData notify" message.

985 For the nodeManagementDetailedDiscoveryData read Function it is recommended to use a partial  
 986 read with separated Selectors that may use one of the following Elements:

- 987 - entityType
- 988 - featureType

989 Note: Even with the usage of Selectors Features and Entities that are not relevant for this Use Case  
 990 may be discovered. However, only Features and Entities that fulfil the hierarchical order as described  
 991 within the Actors' sections shall be considered for this Use Case.

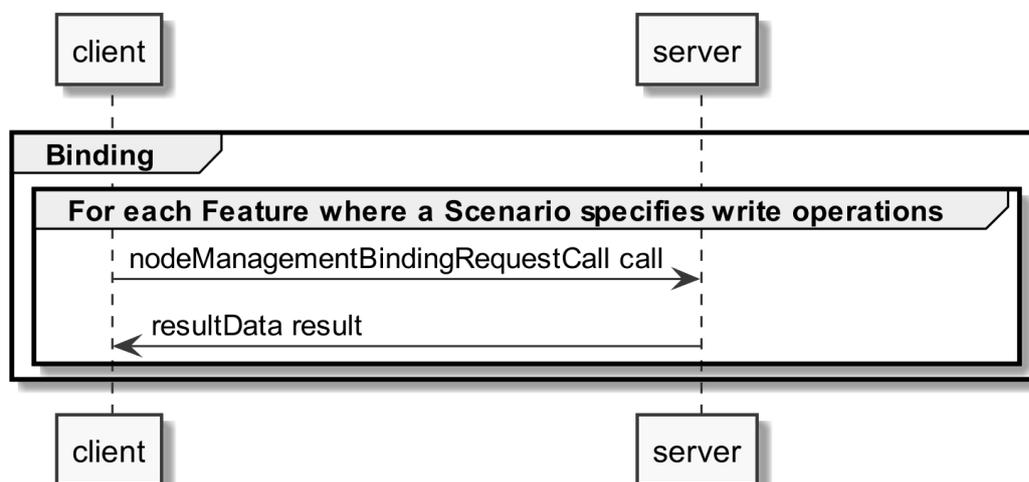

992 A "partial" notify SHALL be supported without using Selectors and Elements. Partial "delete" notify  
 993 SHOULD also be supported with separated Selectors that may use one of the following Elements:

- 994 - entityAddress
- 995 - featureAddress

996

### 997 3.3.3 Binding

998 A server SHALL support binding for all Features that contain writeable or changeable data. Before a  
 999 write on a Function of a Feature occurs, the client SHALL create a binding to the corresponding  
 1000 Feature. For this the nodeManagementBindingRequestCall Function is used as shown in the following  
 1001 sequence diagram:

1002

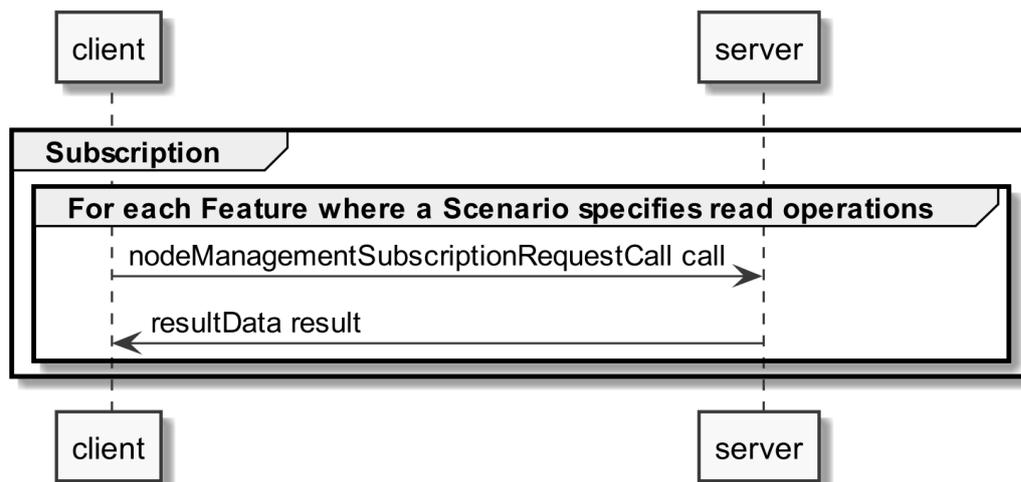

1003 *Figure 8: Pre-Scenario communication - Binding sequence diagram*

1004 If functionality is added or removed dynamically, binding may not be possible at all times on the  
 1005 required Functions. A client SHALL retry to create a binding again when receiving according updated  
 1006 detailed discovery information.

1007

### 1008 3.3.4 Subscription

1009 A server SHALL support subscription for all Features that contain readable data that may change  
 1010 during runtime. The client SHALL create a subscription for all Features that the client wants to read.  
 1011 For this the nodeManagementSubscriptionRequestCall Function is used as shown in the following  
 1012 sequence diagram:

1013

1014 *Figure 9: Pre-Scenario communication - Subscription sequence diagram*

1015 If the subscription request fails (e.g. because it is not supported by the server or the maximum  
 1016 number of possible subscriptions is reached), the client SHOULD read the data periodically (so-called  
 1017 "polling").

1018 If functionality is added or removed dynamically, subscription may not be possible at all times on the  
 1019 required Functions. A client SHALL retry its subscription procedure again when receiving according  
 1020 updated detailed discovery information.

1021

### 1022 3.3.5 Dynamic behaviour

1023 In case Entities or Features are removed, a nodeManagementDetailedDiscoveryData "notify" is  
 1024 transmitted that informs about the deleted Entities and Features. All existing binding or subscription  
 1025 entries on the deleted Features SHALL be deleted by each device.

1026 In case Entities or Features are added the Pre-Scenario communication starts with transmitting a  
 1027 nodeManagementDetailedDiscoveryData "notify" that contains the added Entities and Features.

1028

## 1029 3.4 Scenarios

### 1030 3.4.1 Scenario 1 - Monitor PV feed-in power limitation factor (PLF<sub>PV, feed-in, max, pct</sub>)

#### 1031 3.4.1.1 Pre-Scenario communication

- 1032 1. **Detailed discovery:** Actors that act as client within this Scenario, need to know the addresses  
 1033 of the server Features used in the Initial Scenario communication. If the address of a  
 1034 particular server Feature is not known, the detailed discovery must be used, as described in  
 1035 section 3.3.2.
- 1036 2. **Binding:** Binding SHOULD NOT be used for this Scenario.
- 1037 3. **Subscription:** Actors SHALL create a subscription for each server Feature that is relevant for  
 1038 the corresponding Actor within this Scenario, as described in section 3.3.4.

1039 The Initial Scenario communication SHALL start at the latest when the required resources on an Actor  
 1040 are known and the necessary binding and subscription procedures have been finished. However, as

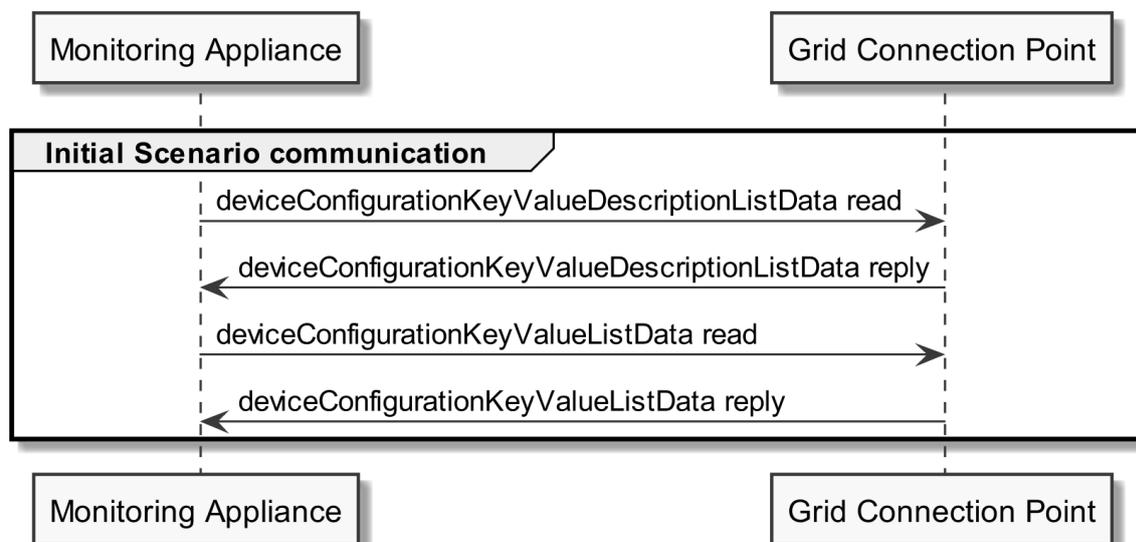

1041 soon as the address of a required resource is known, the Initial Scenario communication for this  
 1042 resource MAY start already, even if the addresses of other required resources are not known yet.

1043 If required resources are removed and added again, they are re-discovered, and the Initial Scenario  
 1044 communication is triggered again for those resources.

1045

1046 **3.4.1.2 Initial Scenario communication**

1047 Each time a (re-)connection is established, even if the Pre-Scenario communication phase is skipped,  
 1048 the messages shown in the following sequence diagram SHALL be exchanged, as the corresponding  
 1049 resources may have changed in the meantime:

1050

1051 *Figure 10: Scenario 1 - Initial Scenario communication sequence diagram*

1052 The deviceConfigurationKeyValueDescriptionListData read SHOULD be a "partial" read operation  
 1053 with the following Selectors:

- 1054 - keyName = "pvCurtaimentLimitFactor"

1055 The deviceConfigurationKeyValueListData read SHOULD be a "partial" read operation with the  
 1056 following Selectors:

- 1057 - keyId (derived from the deviceConfigurationKeyValueDescriptionListData reply)

1058 Note: If partial read is not supported a full read SHALL be performed.

1059

1060 The following table shows where the required content of the messages from the sequence diagram is  
 1061 described:

| Message name from sequence diagram                   | Content description in table | Scenario number in table |
|--|------------------------------|--------------------------|
| deviceConfigurationKeyValueDescriptionListData reply | Table 17                     | 1                        |
| deviceConfigurationKeyValueListData reply            | Table 18                     | 1                        |

1062 *Table 24: Initial Scenario communication content references for Scenario 1*

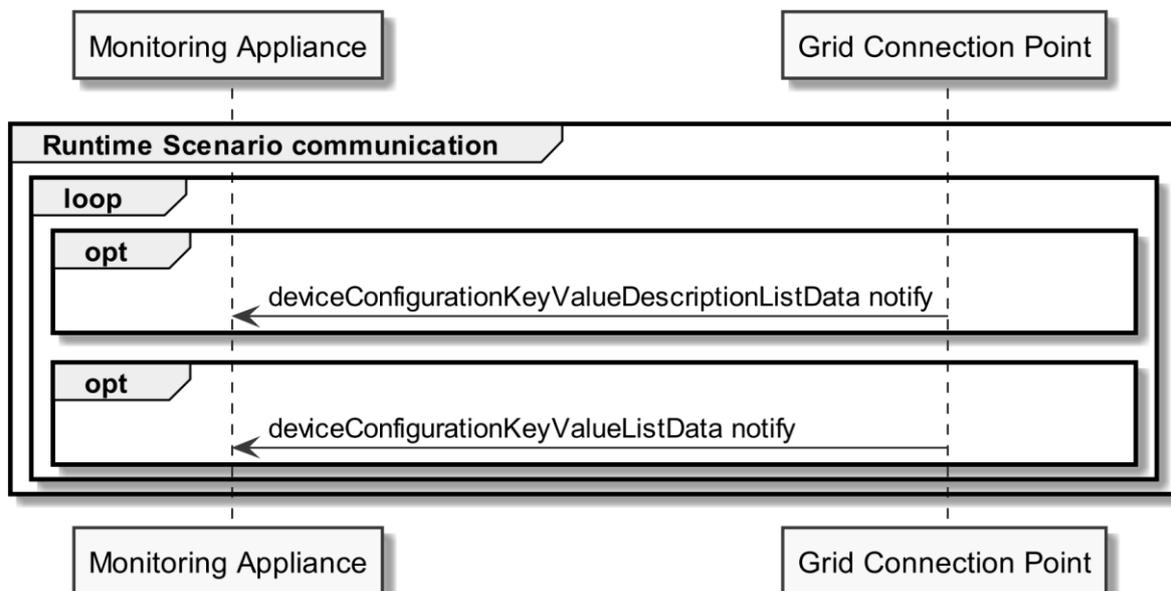

1063 Note: Within the Initial Scenario communication, the content required by this Scenario MAY not be  
 1064 provided completely, but later during Runtime Scenario communication.

1065

### 1066 3.4.1.3 Runtime Scenario communication

1067 Based on the Initial Scenario communication, the Runtime Scenario communication provides updates  
 1068 during runtime.

1069 If one of the referenced server Functions' data change, the server SHALL submit the change as shown  
 1070 in the following figure:

1071

1072 *Figure 11: Scenario 1 - Runtime Scenario communication sequence diagram*

1073 Note: Normally, in this Scenario the configuration parameter does not change during runtime. Hence,  
 1074 usually no notifications are sent during runtime in this Scenario.

1075 Partial notifications without Selectors or Elements SHALL be supported for all Functions used in this  
 1076 Scenario.

1077 For deviceConfigurationKeyValueDescriptionListData notify and  
 1078 deviceConfigurationKeyValueListData notify "partial" delete notifications SHOULD be supported with  
 1079 the Selector:

1080 - keyId

1081 Note: To interpret partial notification messages correctly the information obtained during the Initial  
 1082 Scenario communication phase is required.

1083 Note: A read operation ("polling") on all Functions is possible at any time, e.g. if a notification could  
 1084 not be evaluated.

1085

1086 The following table shows where the required content of the messages of the sequence diagram is  
1087 described:

| Message name from sequence diagram                    | Content description in table | Scenario number in table |
|---|------------------------------|--------------------------|
| deviceConfigurationKeyValueDescriptionListData notify | Table 17                     | 1                        |
| deviceConfigurationKeyValueListData notify            | Table 18                     | 1                        |

1088 *Table 25: Runtime Scenario communication content references for Scenario 1*

1089

#### 1090 **3.4.1.4 Additional information**

1091 None.

1092

### 1093 **3.4.2 Scenario 2 - Monitor momentary power consumption/production ( $P_{\text{grid, mom}}$ )**

#### 1094 **3.4.2.1 Pre-Scenario communication**

- 1095 1. **Detailed discovery:** Actors that act as client within this Scenario, need to know the addresses  
1096 of the server Features used in the Initial Scenario communication. If the address of a  
1097 particular server Feature is not known, the detailed discovery must be used, as described in  
1098 section 3.3.2.
- 1099 2. **Binding:** Binding SHOULD NOT be used for this Scenario.
- 1100 3. **Subscription:** Actors SHALL create a subscription for each server Feature that is relevant for  
1101 the corresponding Actor within this Scenario, as described in section 3.3.4.

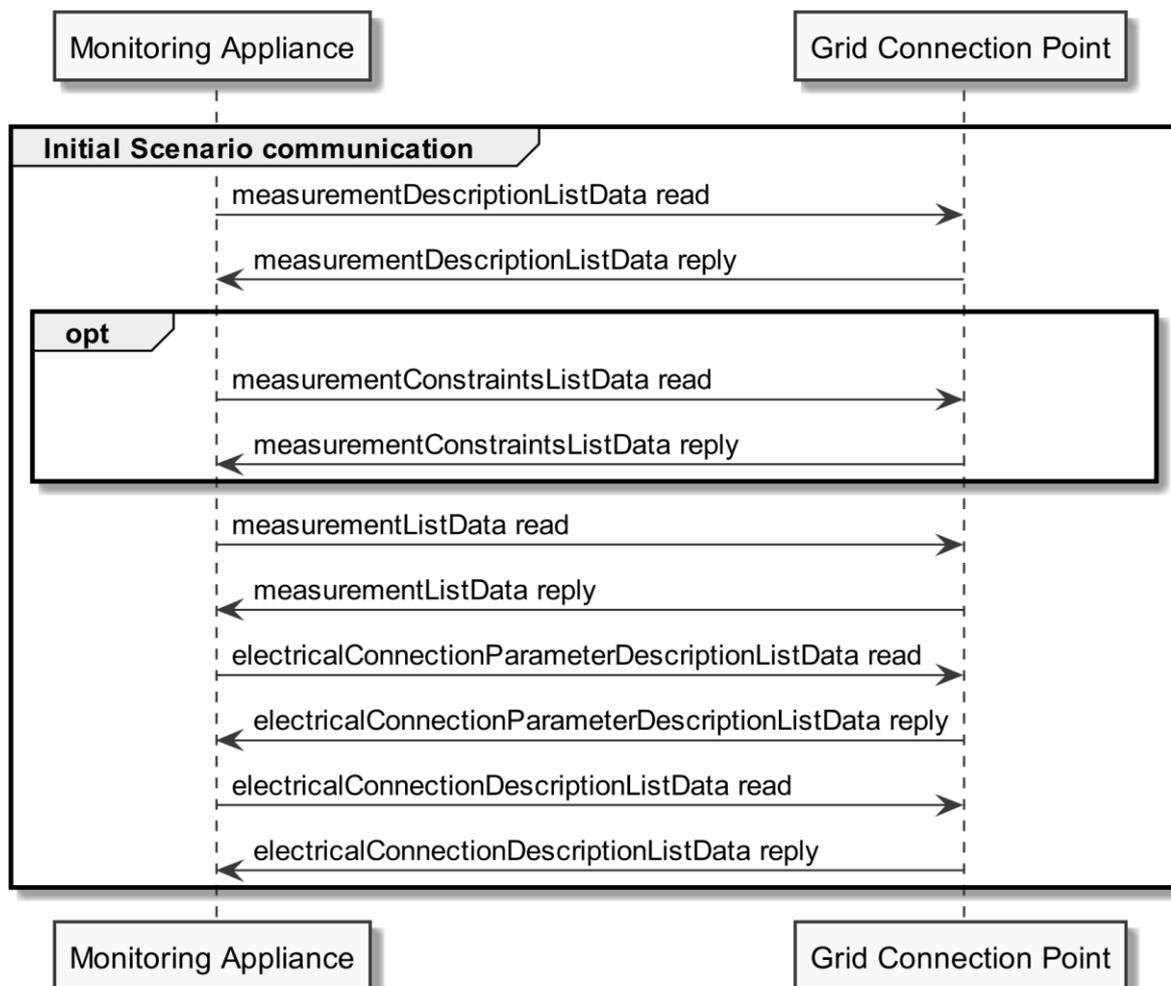

1102 The Initial Scenario communication SHALL start at the latest when the required resources on an Actor  
1103 are known and the necessary binding and subscription procedures have been finished. However, as  
1104 soon as the address of a required resource is known, the Initial Scenario communication for this  
1105 resource MAY start already, even if the addresses of other required resources are not known yet.

1106 If required resources are removed and added again, they are re-discovered, and the Initial Scenario  
1107 communication is triggered again for those resources.

1108

#### 1109 **3.4.2.2 Initial Scenario communication**

1110 Each time a (re-)connection is established, even if the Pre-Scenario communication phase is skipped,  
1111 the messages shown in the following sequence diagram SHALL be exchanged, as the corresponding  
1112 resources may have changed in the meantime:

1113

1114 *Figure 12: Scenario 2 - Initial Scenario communication sequence diagram*

1115 Note: The initiation of the optional sequence part (marked with "opt" in the figure) is optional for the  
 1116 "Monitoring Appliance" even if the "Grid Connection Point" can provide the requested Function.

1117 The measurementDescriptionListData read SHOULD be a "partial" read operation with the following  
 1118 Selectors:

- 1119 - scopeType = "acPowerTotal"

1120 The measurementConstraintsListData read, measurementListData read and  
 1121 electricalConnectionParameterDescriptionListData read SHOULD be a "partial" read operation with  
 1122 the following Selectors:

- 1123 - measurementId (derived from the measurementDescriptionListData reply)

1124 The electricalConnectionDescriptionListData read SHOULD be a "partial" read operation with the  
 1125 following Selectors:

- 1126 - electricalConnectionId (derived from the electricalConnectionParameterDescriptionListData  
 1127 reply)

1128 Note: If partial read is not supported a full read SHALL be performed.

1129

1130 The following table shows where the required content of the messages of the sequence diagram is  
 1131 described:

| Message name from sequence diagram                     | Content description in table | Scenario number in table |
|--|------------------------------|--------------------------|
| measurementDescriptionListData reply                   | Table 19                     | 2                        |
| measurementConstraintsListData reply                   | Table 20                     | 2                        |
| measurementListData reply                              | Table 21                     | 2                        |
| electricalConnectionParameterDescriptionListData reply | Table 23                     | 2                        |
| electricalConnectionDescriptionListData reply          | Table 22                     | 2                        |

1132 *Table 26: Initial Scenario communication content references for Scenario 2*

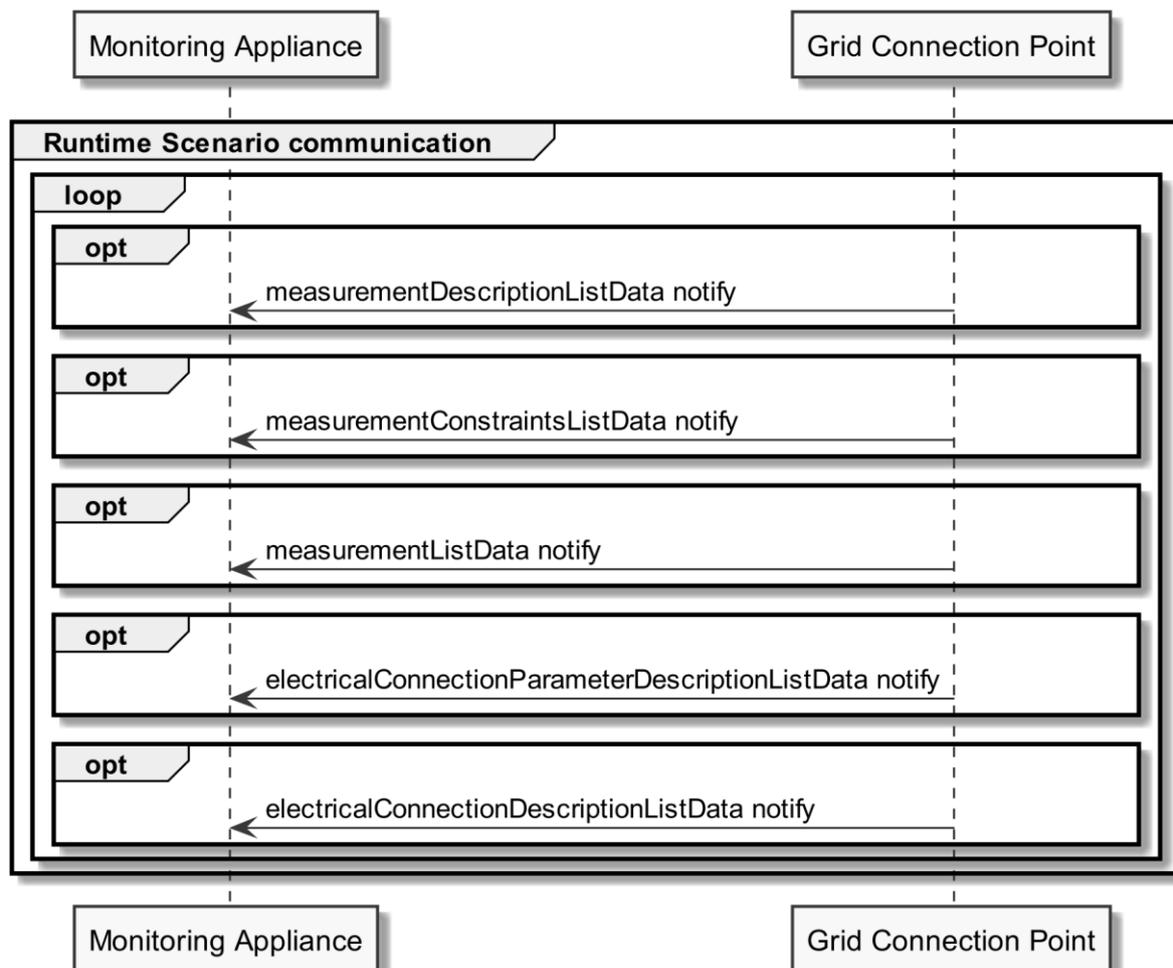

1133 Note: Within the Initial Scenario communication, the content required by this Scenario MAY not be  
 1134 provided completely, but later during Runtime Scenario communication.

1135

### 1136 **3.4.2.3 Runtime Scenario communication**

1137 Based on the Initial Scenario communication, the Runtime Scenario communication provides updates  
 1138 during runtime.

1139 If one of the referenced server Functions' data change the server SHALL submit the change as shown  
 1140 in the following figure:

1141

1142 *Figure 13: Scenario 2 - Runtime Scenario communication sequence diagram*

1143 Note: Normally, in this Scenario only the "measurementListData" Function changes during runtime.  
 1144 Hence, usually no notifications of the other Functions of this Scenario are sent during runtime.

1145 Partial notifications without Selectors or Elements SHALL be supported for all Functions used in this  
 1146 Scenario.

1147 For measurementDescriptionListData notify, measurementConstraintsListData notify and  
 1148 measurementListData notify "partial" delete notifications SHOULD be supported with the Selector:

1149 - measurementId

1150 For electricalConnectionParameterDescriptionListData notify "partial" delete notifications SHOULD  
 1151 be supported with the Selectors:

1152 - electricalConnectionId

1153 - parameterId

1154 - measurementId

1155 Note: To interpret partial notification messages correctly the information obtained during the Initial  
 1156 Scenario communication phase is required.

1157 Note: A read operation ("polling") on all Functions is possible at any time, e.g. if a notification could  
1158 not be evaluated.

1159

1160 The following table shows where the required content of the messages of the sequence diagram is  
1161 described:

| Message name from sequence diagram                      | Content description in table | Scenario number in table |
|---|------------------------------|--------------------------|
| measurementDescriptionListData notify                   | Table 19                     | 2                        |
| measurementConstraintsListData notify                   | Table 20                     | 2                        |
| measurementListData notify                              | Table 21                     | 2                        |
| electricalConnectionParameterDescriptionListData notify | Table 23                     | 2                        |
| electricalConnectionDescriptionListData notify          | Table 22                     | 2                        |

1162 *Table 27: Runtime Scenario communication content references for Scenario 2*

1163

#### 1164 **3.4.2.4 Additional information**

1165 Note: Both, consumed and produced power, are represented by the single measurement value of  
1166 this Scenario. Whether the device consumes or produces power is indicated by the sign of the  
1167 measurement value: The Element "positiveEnergyDirection" in the Function  
1168 "electricalConnectionDescriptionListData" determines how the sign SHALL be interpreted (e.g. if  
1169 positiveEnergyDirection is set to "consume" ([MGCP-006]), positive values SHALL be interpreted as  
1170 consumed power and negative values SHALL be interpreted as produced power).

1171 Note: Within this Use Case, only the newest measurement value SHALL be stated ([MGCP-007]).  
1172 Additional historical values are forbidden.

1173

### 1174 **3.4.3 Scenario 3 - Monitor total feed-in energy ( $E_{\text{feed-in, total}}$ )**

#### 1175 **3.4.3.1 Pre-Scenario communication**

- 1176 1. **Detailed discovery:** Actors that act as client within this Scenario, need to know the addresses  
1177 of the server Features used in the Initial Scenario communication. If the address of a  
1178 particular server Feature is not known, the detailed discovery must be used, as described in  
1179 section 3.3.2.
- 1180 2. **Binding:** Binding SHOULD NOT be used for this Scenario.
- 1181 3. **Subscription:** Actors SHALL create a subscription for each server Feature that is relevant for  
1182 the corresponding Actor within this Scenario, as described in section 3.3.4.

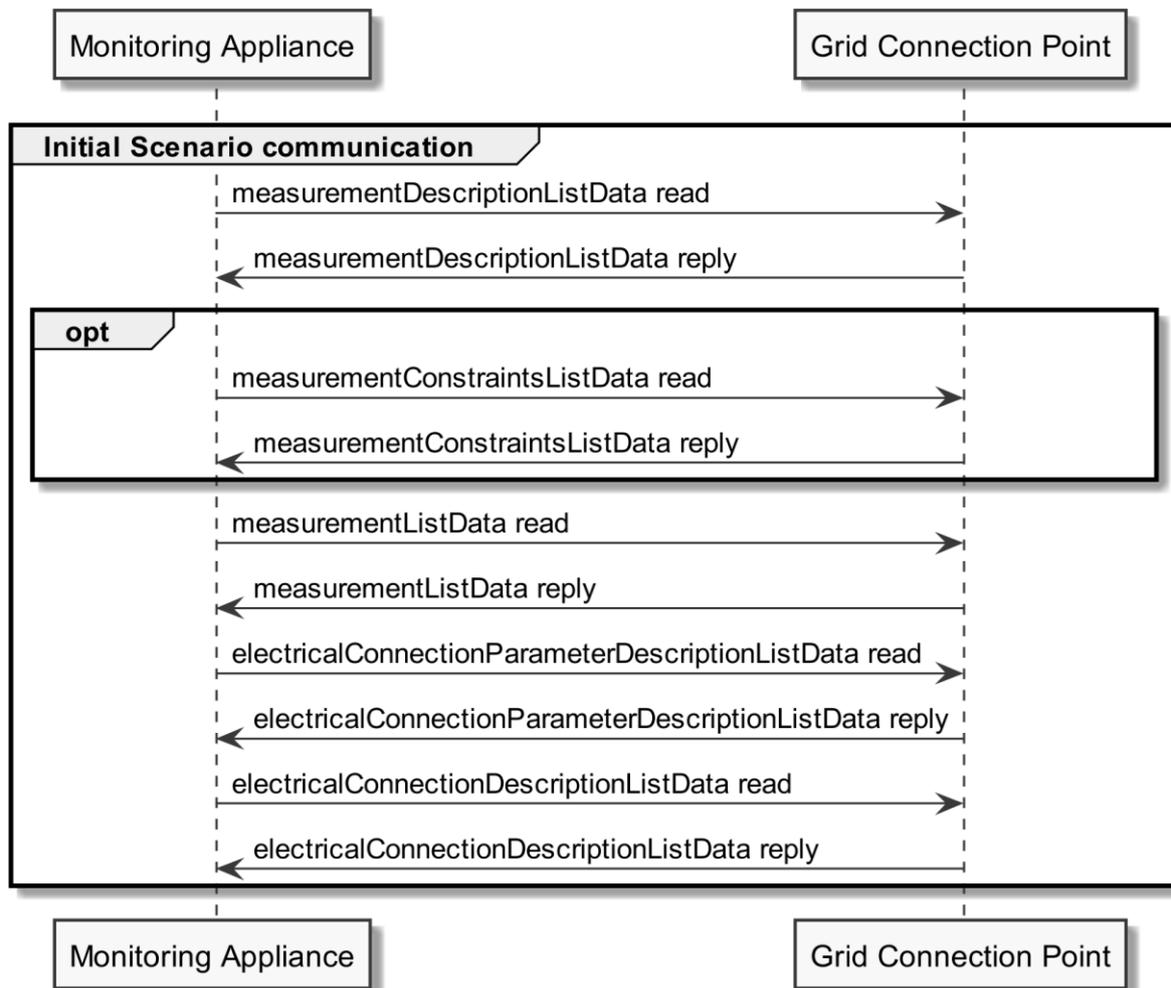

1183 The Initial Scenario communication SHALL start at the latest when the required resources on an Actor  
1184 are known and the necessary binding and subscription procedures have been finished. However, as  
1185 soon as the address of a required resource is known, the Initial Scenario communication for this  
1186 resource MAY start already, even if the addresses of other required resources are not known yet.

1187 If required resources are removed and added again, they are re-discovered, and the Initial Scenario  
1188 communication is triggered again for those resources.

1189

1190 **3.4.3.2 Initial Scenario communication**

1191 Each time a (re-)connection is established, even if the Pre-Scenario communication phase is skipped,  
 1192 the messages shown in the following sequence diagram SHALL be exchanged, as the corresponding  
 1193 resources may have changed in the meantime:

1194

1195 *Figure 14: Scenario 3 - Initial Scenario communication sequence diagram*

1196 Note: The initiation of the optional sequence part (marked with "opt" in the figure) is optional for the  
 1197 "Monitoring Appliance" even if the "Grid Connection Point" can provide the requested Function.

1198 The measurementDescriptionListData read SHOULD be a "partial" read operation with the following  
 1199 Selectors:

- 1200 - scopeType = "gridFeedIn"

1201 The measurementConstraintsListData read, measurementListData read and  
 1202 electricalConnectionParameterDescriptionListData read SHOULD be a "partial" read operation with  
 1203 the following Selectors:

- 1204 - measurementId (derived from the measurementDescriptionListData reply)

1205 The electricalConnectionDescriptionListData read SHOULD be a "partial" read operation with the  
1206 following Selectors:

- 1207 - electricalConnectionId (derived from the electricalConnectionParameterDescriptionListData  
1208 reply)

1209 Note: If partial read is not supported a full read SHALL be performed.

1210

1211 The following table shows where the required content of the messages of the sequence diagram is  
1212 described:

| Message name from sequence diagram                     | Content description in table | Scenario number in table |
|--|------------------------------|--------------------------|
| measurementDescriptionListData reply                   | Table 19                     | 3                        |
| measurementConstraintsListData reply                   | Table 20                     | 3                        |
| measurementListData reply                              | Table 21                     | 3                        |
| electricalConnectionParameterDescriptionListData reply | Table 23                     | 3                        |
| electricalConnectionDescriptionListData reply          | Table 22                     | 3                        |

1213 *Table 28: Initial Scenario communication content references for Scenario 3*

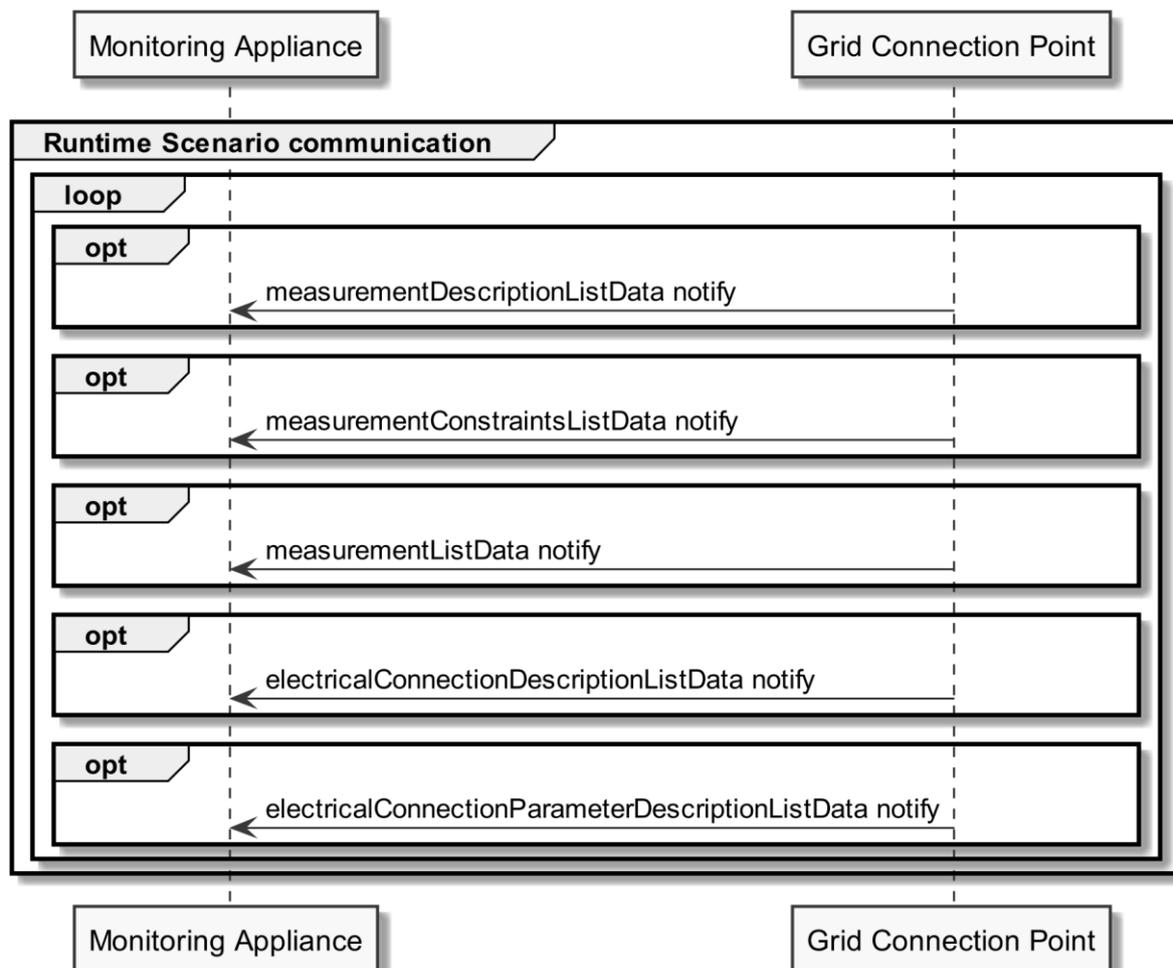

1214 Note: Within the Initial Scenario communication, the content required by this Scenario MAY not be  
1215 provided completely, but later during Runtime Scenario communication.

1216

### 1217 **3.4.3.3 Runtime Scenario communication**

1218 Based on the Initial Scenario communication, the Runtime Scenario communication provides updates  
1219 during runtime.

1220 If one of the referenced server Functions' data change the server SHALL submit the change as shown  
1221 in the following figure:

1222

1223 *Figure 15: Scenario 3 - Runtime Scenario communication sequence diagram*

1224 Note: Normally, in this Scenario only the "measurementListData" Function changes during runtime.  
 1225 Hence, usually no notifications of the other Functions of this Scenario are sent during runtime.

1226 Partial notifications without Selectors or Elements SHALL be supported for all Functions used in this  
 1227 Scenario.

1228 For measurementDescriptionListData notify, measurementConstraintsListData notify and  
 1229 measurementListData notify "partial" delete notifications SHOULD be supported with the Selector:

1230 - measurementId

1231 For electricalConnectionParameterDescriptionListData notify "partial" delete notifications SHOULD  
 1232 be supported with the Selectors:

1233 - electricalConnectionId

1234 - parameterId

1235 - measurementId

1236 Note: To interpret partial notification messages correctly the information obtained during the Initial  
 1237 Scenario communication phase is required.

1238 Note: A read operation ("polling") on all Functions is possible at any time, e.g. if a notification could  
1239 not be evaluated.

1240

1241 The following table shows where the required content of the messages from the sequence diagram is  
1242 described:

| Message name from sequence diagram                      | Content description in table | Scenario number in table |
|---|------------------------------|--------------------------|
| measurementDescriptionListData notify                   | Table 19                     | 3                        |
| measurementConstraintsListData notify                   | Table 20                     | 3                        |
| measurementListData notify                              | Table 21                     | 3                        |
| electricalConnectionParameterDescriptionListData notify | Table 23                     | 3                        |
| electricalConnectionDescriptionListData notify          | Table 22                     | 3                        |

1243 *Table 29: Runtime Scenario communication content references for Scenario 3*

1244

#### 1245 **3.4.3.4 Additional information**

1246 Note: The feed-in energy is cumulated since the installation of the electrical smart meter or  
1247 submeter or since manual change by the operator (e.g. manual reset of the value or firmware  
1248 update, etc.). The total feed-in energy only counts energy fed into the grid and is not reduced by  
1249 energy consumed from the grid [MGCP-003c].

1250 Note: Within this Use Case, only the newest measurement value SHALL be stated ([MGCP-007]).  
1251 Additional historical values are forbidden.

1252

### 1253 **3.4.4 Scenario 4 - Monitor total consumed energy ( $E_{\text{grid, total}}$ )**

#### 1254 **3.4.4.1 Pre-Scenario communication**

- 1255 1. **Detailed discovery:** Actors that act as client within this Scenario, need to know the addresses  
1256 of the server Features used in the Initial Scenario communication. If the address of a  
1257 particular server Feature is not known, the detailed discovery must be used, as described in  
1258 section 3.3.2.
- 1259 2. **Binding:** Binding SHOULD NOT be used for this Scenario.
- 1260 3. **Subscription:** Actors SHALL create a subscription for each server Feature that is relevant for  
1261 the corresponding Actor within this Scenario, as described in section 3.3.4.

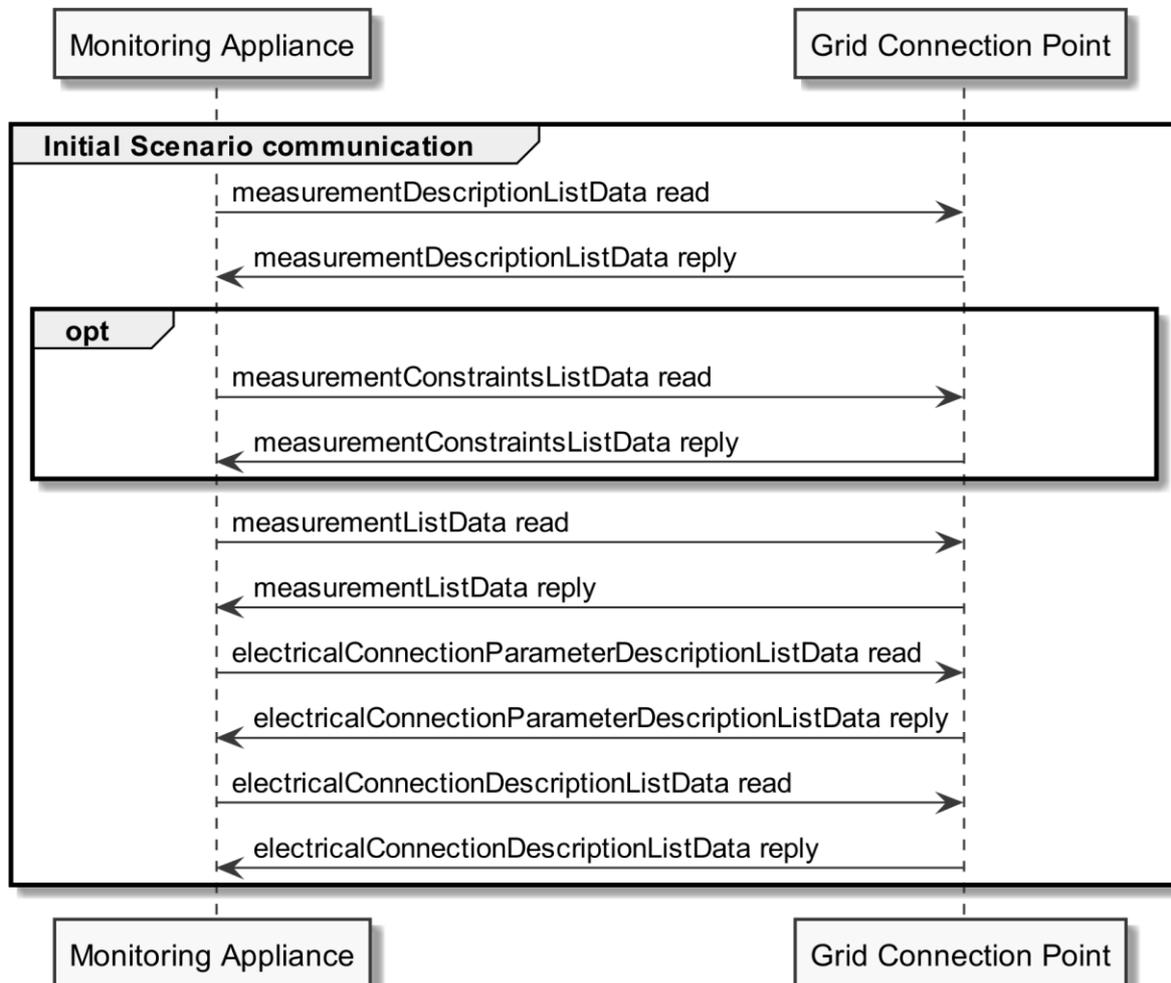

1262 The Initial Scenario communication SHALL start at the latest when the required resources on an Actor  
1263 are known and the necessary binding and subscription procedures have been finished. However, as  
1264 soon as the address of a required resource is known, the Initial Scenario communication for this  
1265 resource MAY start already, even if the addresses of other required resources are not known yet.

1266 If required resources are removed and added again, they are re-discovered, and the Initial Scenario  
1267 communication is triggered again for those resources.

1268

1269 **3.4.4.2 Initial Scenario communication**

1270 Each time a (re-)connection is established, even if the Pre-Scenario communication phase is skipped,  
 1271 the messages shown in the following sequence diagram SHALL be exchanged, as the corresponding  
 1272 resources may have changed in the meantime:

1273

1274 *Figure 16: Scenario 4 - Initial Scenario communication sequence diagram*

1275 Note: The initiation of the optional sequence part (marked with "opt" in the figure) is optional for the  
 1276 "Monitoring Appliance" even if the "Grid Connection Point" can provide the requested Function.

1277 The `measurementDescriptionListData read` SHOULD be a "partial" read operation with the following  
 1278 Selectors:

- 1279 - `scopeType = "gridConsumption"`

1280 The `measurementConstraintsListData read`, `measurementListData read` and  
 1281 `electricalConnectionParameterDescriptionListData read` SHOULD be a "partial" read operation with  
 1282 the following Selectors:

- 1283 - `measurementId` (derived from the `measurementDescriptionListData reply`)

1284 The `electricalConnectionDescriptionListData read` SHOULD be a "partial" read operation with the  
 1285 following Selectors:

1286 - electricalConnectionId (derived from the electricalConnectionParameterDescriptionListData  
1287 reply)

1288 Note: If partial read is not supported a full read SHALL be performed.

1289

1290 The following table shows where the required content of the messages from the sequence diagram is  
1291 described:

| Message name from sequence diagram   | Content description in table | Scenario number in table |
|--|------------------------------|--------------------------|
| measurementDescriptionListData reply   | Table 19                     | 4                        |
| measurementConstraintsListData reply   | Table 20                     | 4                        |
| measurementListData reply  | Table 21                     | 4                        |
| electricalConnectionDescriptionListData reply  | Table 23                     | 4                        |
| electricalConnectionDescriptionListData<br>electricalConnectionDescriptionListData reply | Table 22                     | 4                        |

1292 *Table 30: Initial Scenario communication content references for Scenario 4*

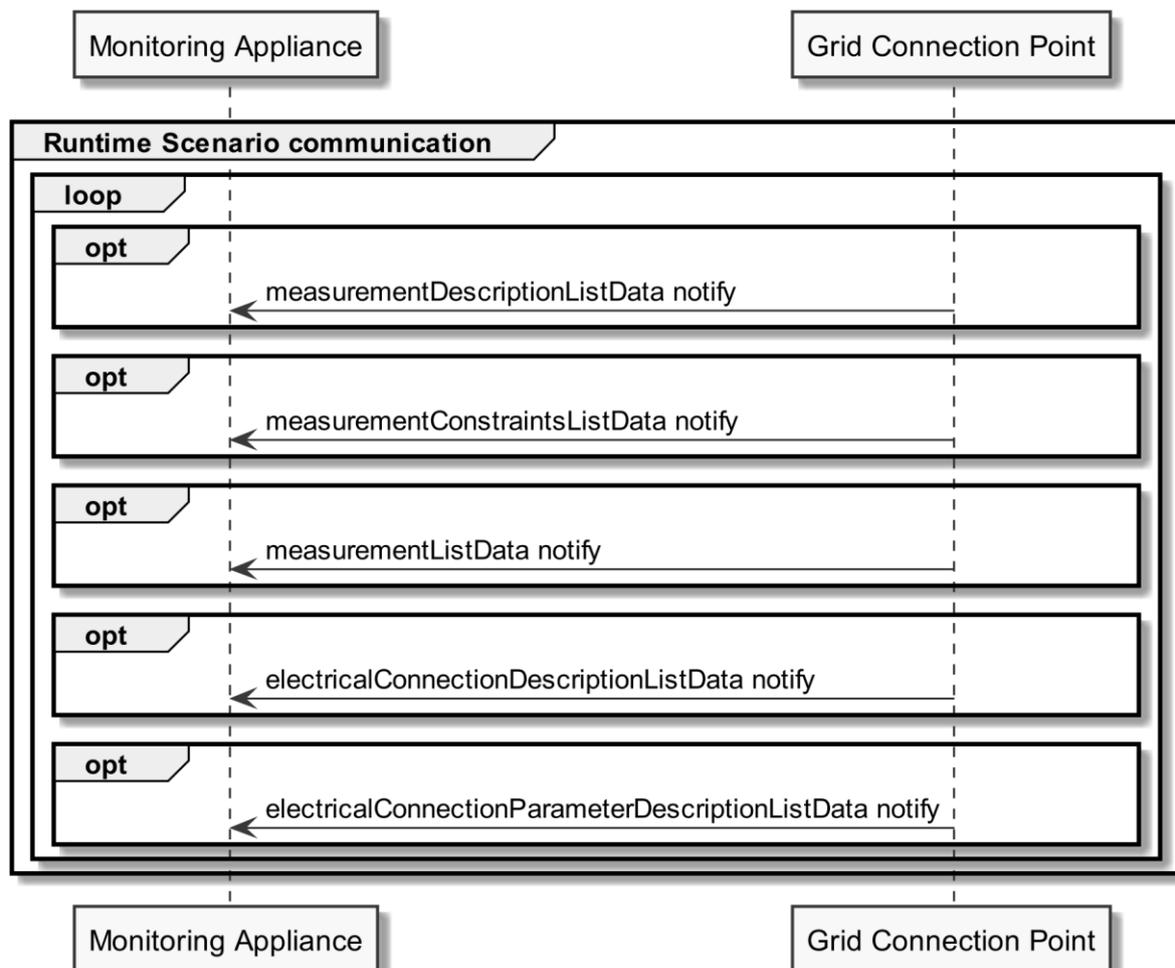

1293 Note: Within the Initial Scenario communication, the content required by this Scenario MAY not be  
1294 provided completely, but later during Runtime Scenario communication.

1295

#### 1296 **3.4.4.3 Runtime Scenario communication**

1297 Based on the Initial Scenario communication, the Runtime Scenario communication provides updates  
1298 during runtime.

1299 If one of the referenced server Functions' data change the server SHALL submit the change as shown  
1300 in the following figure:

1301

1302 *Figure 17: Scenario 4 - Runtime Scenario communication sequence diagram*

1303 Note: Normally, in this Scenario only the "measurementListData" Function changes during runtime.  
 1304 Hence, usually no notifications of the other Functions of this Scenario are sent during runtime.

1305 Partial notifications without Selectors or Elements SHALL be supported for all Functions used in this  
 1306 Scenario.

1307 For measurementDescriptionListData notify, measurementConstraintsListData notify and  
 1308 measurementListData notify "partial" delete notifications SHOULD be supported with the Selector:

- 1309 - measurementId

1310 For electricalConnectionParameterDescriptionListData notify "partial" delete notifications SHOULD  
 1311 be supported with the Selectors:

- 1312 - electricalConnectionId
- 1313 - parameterId
- 1314 - measurementId

1315 Note: To interpret partial notification messages correctly the information obtained during the Initial  
 1316 Scenario communication phase is required.

1317 Note: A read operation ("polling") on all Functions is possible at any time, e.g. if a notification could  
1318 not be evaluated.

1319

1320 The following table shows where the required content of the messages from the sequence diagram is  
1321 described:

| Message name from sequence diagram                      | Content description in table | Scenario number in table |
|---|------------------------------|--------------------------|
| measurementDescriptionListData notify                   | Table 19                     | 4                        |
| measurementConstraintsListData notify                   | Table 20                     | 4                        |
| measurementListData notify                              | Table 21                     | 4                        |
| electricalConnectionParameterDescriptionListData notify | Table 23                     | 4                        |
| electricalConnectionDescriptionListData notify          | Table 22                     | 4                        |

1322 *Table 31: Runtime Scenario communication content references for Scenario 4*

1323

#### 1324 **3.4.4.4 Additional information**

1325 Note: The consumed energy is cumulated since the installation of the electrical smart meter or  
1326 submeter or since manual change by the operator (e.g. manual reset of the value or firmware  
1327 update, etc.). The total consumed energy only counts energy consumed from the grid and is not  
1328 reduced by energy fed into the grid [MGCP-004c].

1329 Note: Within this Use Case, only the newest measurement value SHALL be stated ([MGCP-007]).  
1330 Additional historical values are forbidden.

1331

### 1332 **3.4.5 Scenario 5 - Monitor momentary current consumption/production ( $I_{\text{grid, mom}}$ )**

#### 1333 **3.4.5.1 Pre-Scenario communication**

- 1334 1. **Detailed discovery:** Actors that act as client within this Scenario, need to know the addresses  
1335 of the server Features used in the Initial Scenario communication. If the address of a  
1336 particular server Feature is not known, the detailed discovery must be used, as described in  
1337 section 3.3.2.
- 1338 2. **Binding:** Binding SHOULD NOT be used for this Scenario.
- 1339 3. **Subscription:** Actors SHALL create a subscription for each server Feature that is relevant for  
1340 the corresponding Actor within this Scenario, as described in section 3.3.4.

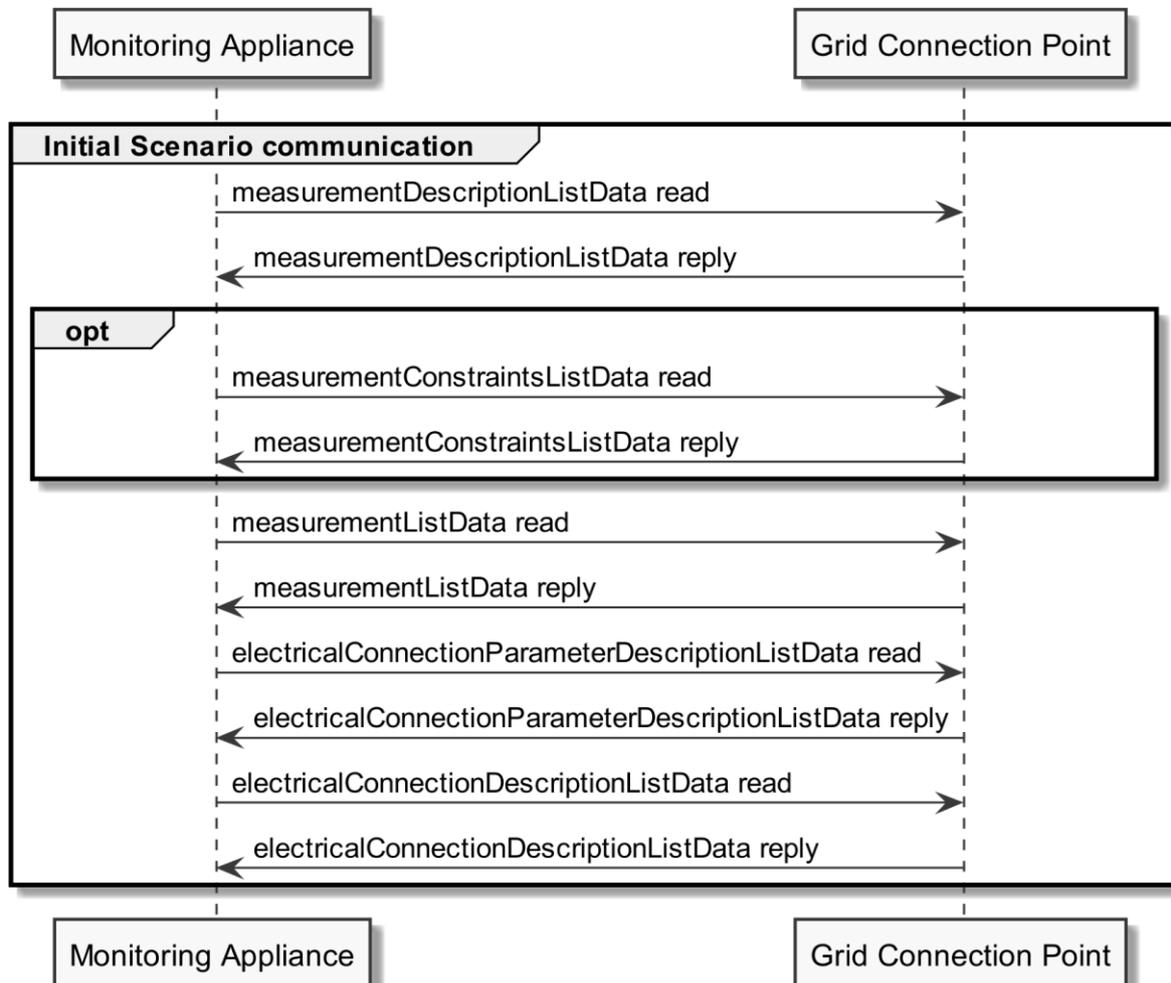

1341 The Initial Scenario communication SHALL start at the latest when the required resources on an Actor  
1342 are known and the necessary binding and subscription procedures have been finished. However, as  
1343 soon as the address of a required resource is known, the Initial Scenario communication for this  
1344 resource MAY start already, even if the addresses of other required resources are not known yet.

1345 If required resources are removed and added again, they are re-discovered, and the Initial Scenario  
1346 communication is triggered again for those resources.

1347

1348 **3.4.5.2 Initial Scenario communication**

1349 Each time a (re-)connection is established, even if the Pre-Scenario communication phase is skipped,  
 1350 the messages shown in the following sequence diagram SHALL be exchanged, as the corresponding  
 1351 resources may have changed in the meantime:

1352

1353 *Figure 18: Scenario 5 - Initial Scenario communication sequence diagram*

1354 Note: The initiation of the optional sequence part (marked with "opt" in the figure) is optional for the  
 1355 "Monitoring Appliance" even if the "Grid Connection Point" can provide the requested Function.

1356 The `measurementDescriptionListData read` SHOULD be a "partial" read operation with the following  
 1357 Selectors:

- 1358 - `scopeType = "acCurrent"`

1359 The `measurementConstraintsListData read`, `measurementListData read` and  
 1360 `electricalConnectionParameterDescriptionListData read` SHOULD be a "partial" read operation with  
 1361 the following Selectors:

- 1362 - `measurementId` (derived from the `measurementDescriptionListData reply`)

1363 The `electricalConnectionDescriptionListData read` SHOULD be a "partial" read operation with the  
 1364 following Selectors:

1365 - electricalConnectionId (derived from the electricalConnectionParameterDescriptionListData  
1366 reply)

1367 Note: If partial read is not supported a full read SHALL be performed.

1368

1369 The following table shows where the required content of the messages of the sequence diagram is  
1370 described:

| Message name from sequence diagram                     | Content description in table | Scenario number in table |
|--|------------------------------|--------------------------|
| measurementDescriptionListData reply                   | Table 19                     | 5                        |
| measurementConstraintsListData reply                   | Table 20                     | 5                        |
| measurementListData reply                              | Table 21                     | 5                        |
| electricalConnectionParameterDescriptionListData reply | Table 23                     | 5                        |
| electricalConnectionDescriptionListData reply          | Table 22                     | 5                        |

1371 *Table 32: Initial Scenario communication content references for Scenario 5*

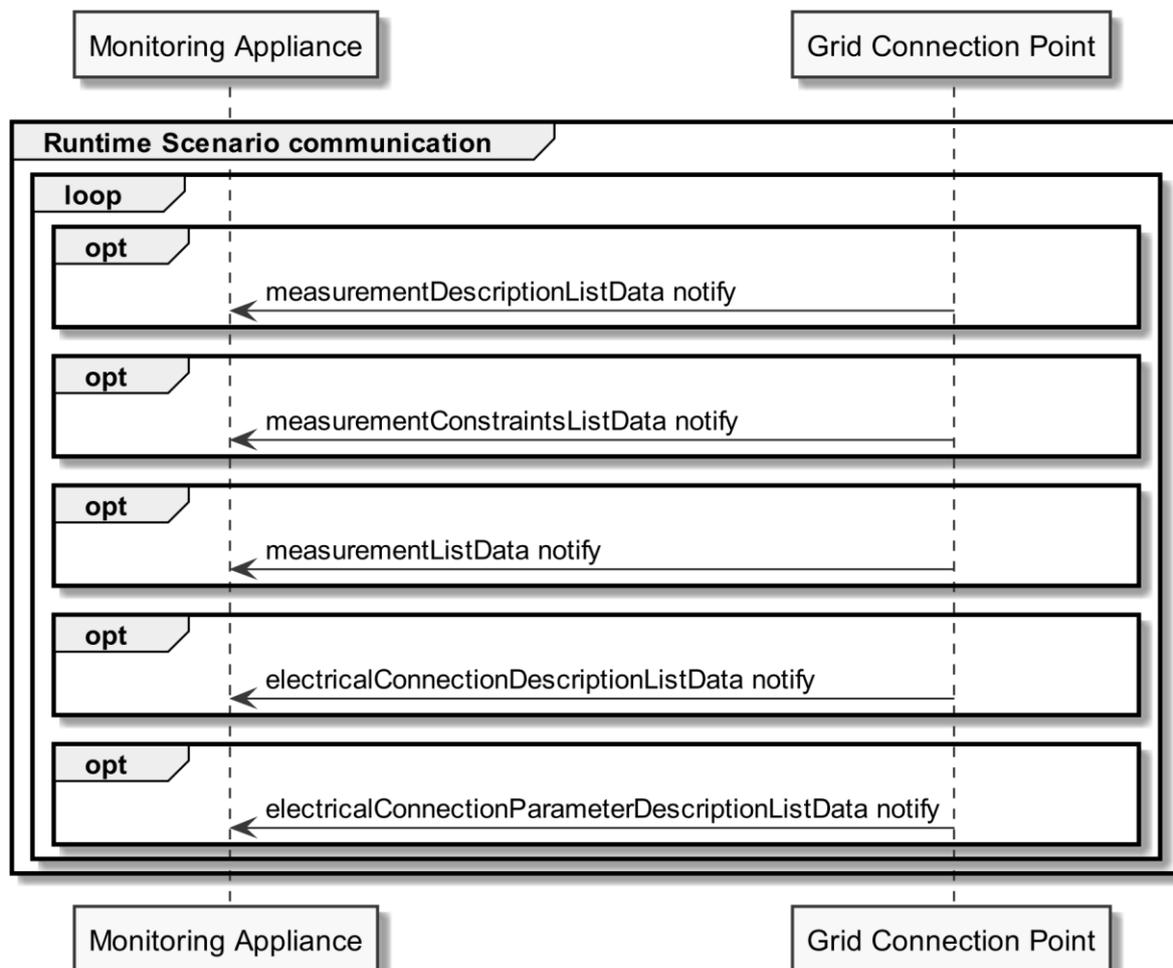

1372 Note: Within the Initial Scenario communication, the content required by this Scenario MAY not be  
1373 provided completely, but later during Runtime Scenario communication.

1374

### 1375 **3.4.5.3 Runtime Scenario communication**

1376 Based on the Initial Scenario communication, the Runtime Scenario communication provides updates  
1377 during runtime.

1378 If one of the referenced server Functions' data change the server SHALL submit the change as shown  
1379 in the following figure:

1380

1381 *Figure 19: Scenario 5 - Runtime Scenario communication sequence diagram*

1382 Note: Normally, in this Scenario only the "measurementListData" Function changes during runtime.  
 1383 Hence, usually no notifications of the other Functions of this Scenario are sent during runtime.

1384 Partial notifications without Selectors or Elements SHALL be supported for all Functions used in this  
 1385 Scenario.

1386 For measurementDescriptionListData notify, measurementConstraintsListData notify and  
 1387 measurementListData notify "partial" delete notifications SHOULD be supported with the Selector:

1388 - measurementId

1389 For electricalConnectionParameterDescriptionListData notify "partial" delete notifications SHOULD  
 1390 be supported with the Selectors:

1391 - electricalConnectionId

1392 - parameterId

1393 - measurementId

1394 Note: To interpret partial notification messages correctly the information obtained during the Initial  
 1395 Scenario communication phase is required.

1396 Note: A read operation ("polling") on all Functions is possible at any time, e.g. if a notification could  
1397 not be evaluated.

1398

1399 The following table shows where the required content of the messages of the sequence diagram is  
1400 described:

| Message name from sequence diagram                      | Content description in table | Scenario number in table |
|---|------------------------------|--------------------------|
| measurementDescriptionListData notify                   | Table 19                     | 5                        |
| measurementConstraintsListData notify                   | Table 20                     | 5                        |
| measurementListData notify                              | Table 21                     | 5                        |
| electricalConnectionParameterDescriptionListData notify | Table 23                     | 5                        |
| electricalConnectionDescriptionListData notify          | Table 22                     | 5                        |

1401 *Table 33: Runtime Scenario communication content references for Scenario 5*

1402

#### 1403 **3.4.5.4 Additional information**

1404 Note: Both, consumed and produced current, are represented by the single measurement value of  
1405 this Scenario. Whether the device consumes or produces current is indicated by the sign of the  
1406 measurement value: The Element "positiveEnergyDirection" in the Function  
1407 "electricalConnectionDescriptionListData" determines how the sign SHALL be interpreted (e.g. if  
1408 positiveEnergyDirection is set to "consume" ([MGCP-006]), positive values SHALL be interpreted as  
1409 consumed current and negative values SHALL be interpreted as produced current).

1410 Note: Within this Use Case, only the newest measurement value SHALL be stated ([MGCP-007]).  
1411 Additional historical values are forbidden.

1412

### 1413 **3.4.6 Scenario 6 - Monitor voltage**

#### 1414 **3.4.6.1 Pre-Scenario communication**

- 1415 1. **Detailed discovery:** Actors that act as client within this Scenario, need to know the addresses  
1416 of the server Features used in the Initial Scenario communication. If the address of a  
1417 particular server Feature is not known, the detailed discovery must be used, as described in  
1418 section 3.3.2.
- 1419 2. **Binding:** Binding SHOULD NOT be used for this Scenario.
- 1420 3. **Subscription:** Actors SHALL create a subscription for each server Feature that is relevant for  
1421 the corresponding Actor within this Scenario, as described in section 3.3.4.

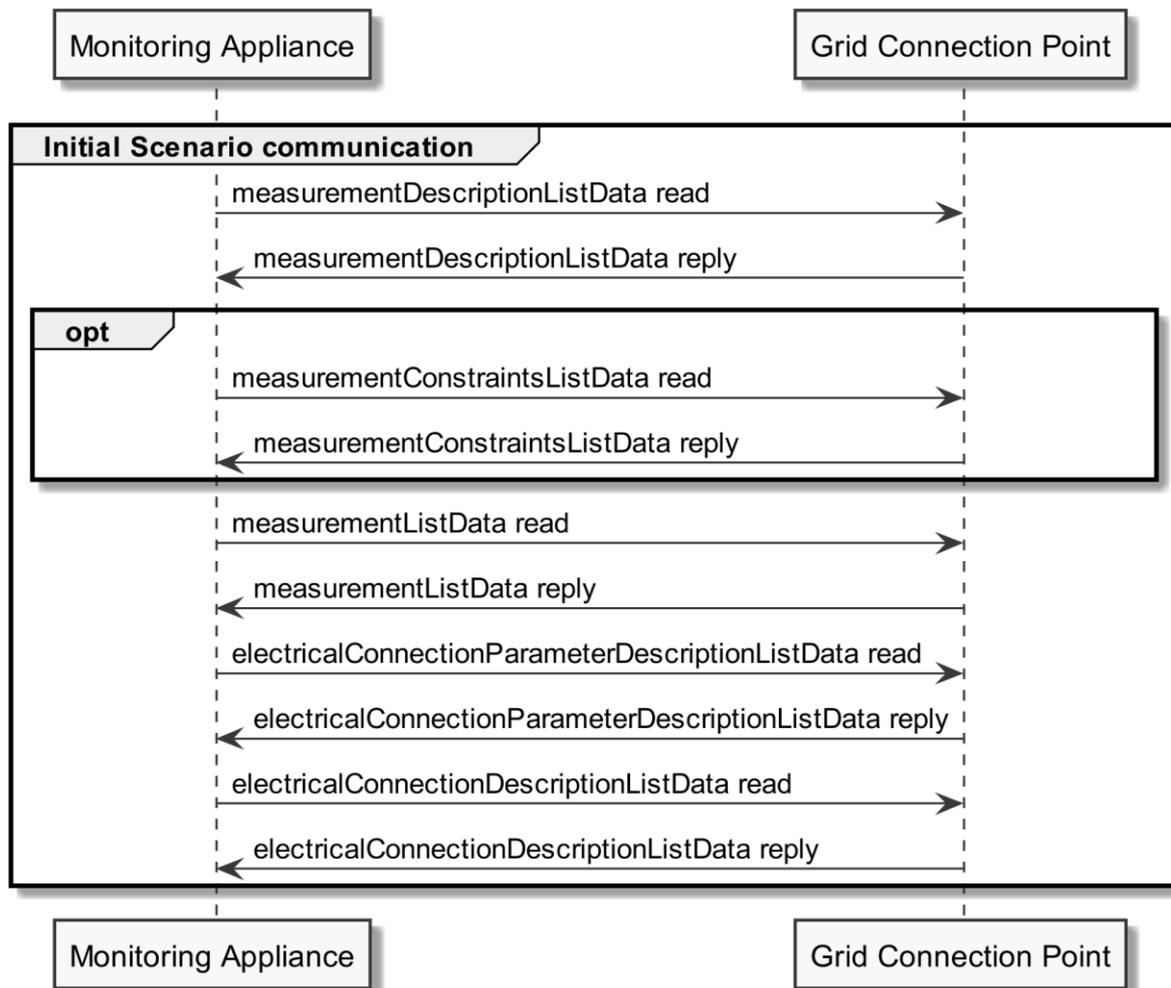

1422 The Initial Scenario communication SHALL start at the latest when the required resources on an Actor  
1423 are known and the necessary binding and subscription procedures have been finished. However, as  
1424 soon as the address of a required resource is known, the Initial Scenario communication for this  
1425 resource MAY start already, even if the addresses of other required resources are not known yet.

1426 If required resources are removed and added again, they are re-discovered, and the Initial Scenario  
1427 communication is triggered again for those resources.

1428

1429 **3.4.6.2 Initial Scenario communication**

1430 Each time a (re-)connection is established, even if the Pre-Scenario communication phase is skipped,  
 1431 the messages shown in the following sequence diagram SHALL be exchanged, as the corresponding  
 1432 resources may have changed in the meantime:

1433

1434 *Figure 20: Scenario 6 - Initial Scenario communication sequence diagram*

1435 The `measurementDescriptionListData read` SHOULD be a "partial" read operation with the following  
 1436 Selector:

- 1437 - `scopeType = "acVoltage"`

1438 The `measurementConstraintsListData read`, `measurementListData read` and  
 1439 `electricalConnectionParameterDescriptionListData read` SHOULD be "partial" read operations with  
 1440 the following Selector:

- 1441 - `measurementId` (derived from the `measurementDescriptionListData reply`)

1442 The `electricalConnectionDescriptionListData read` SHOULD be a "partial" read operation with the  
 1443 following Selector:

1444 - electricalConnectionId (derived from the electricalConnectionParameterDescriptionListData  
1445 reply)

1446 Note: If partial read is not supported, a full read SHALL be performed.

1447

1448 The following table shows where the required content of the messages from the sequence diagram is  
1449 described:

| Message name from sequence diagram                     | Content description in table | Scenario number in table |
|--|------------------------------|--------------------------|
| measurementDescriptionListData reply                   | Table 19                     | 6                        |
| measurementConstraintsListData reply                   | Table 20                     | 6                        |
| measurementListData reply                              | Table 21                     | 6                        |
| electricalConnectionParameterDescriptionListData reply | Table 23                     | 6                        |
| electricalConnectionDescriptionListData reply          | Table 22                     | 6                        |

1450 *Table 34: Initial Scenario communication content references for Scenario 6*

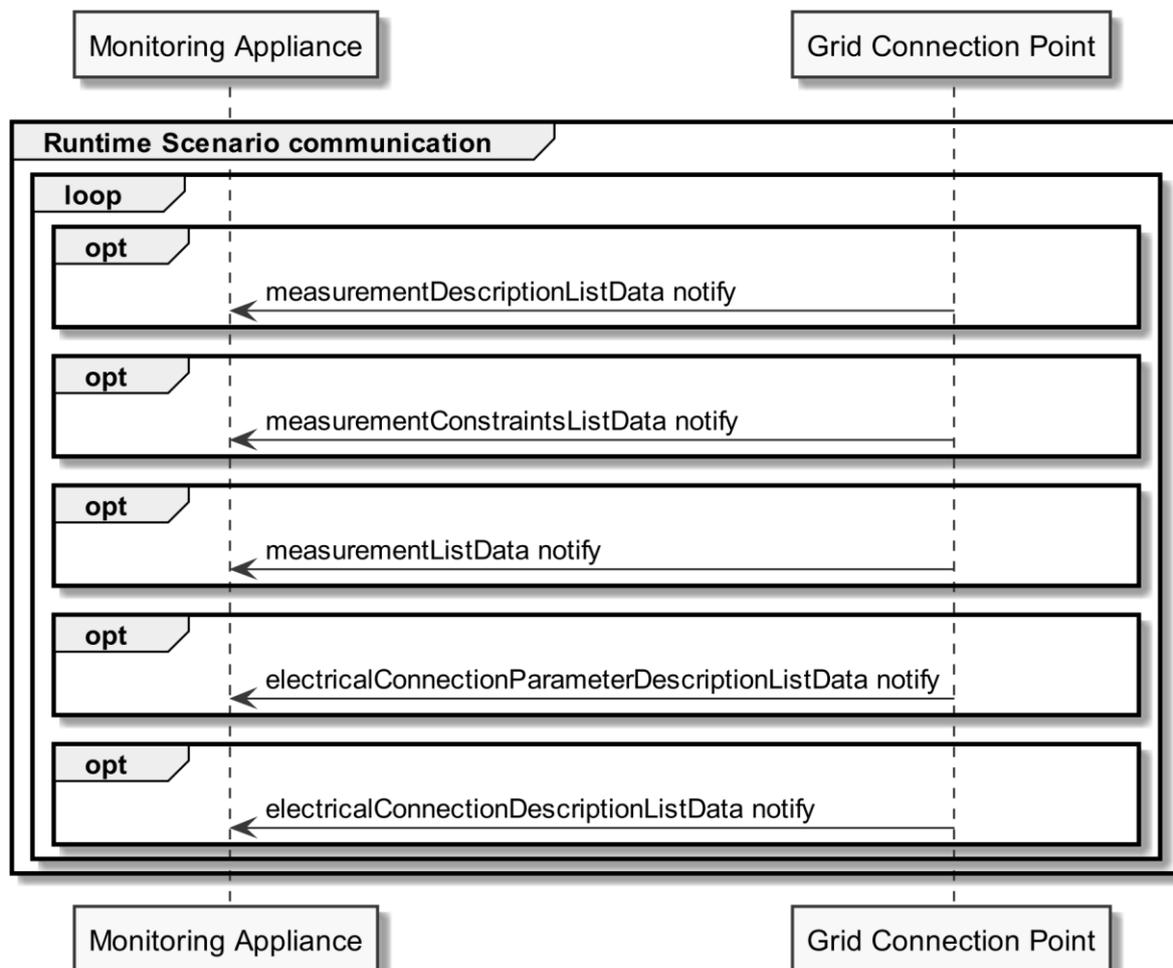

1451 Note: Within the Initial Scenario communication, the content required by this Scenario MAY not be  
1452 provided completely, but later during Runtime Scenario communication.

1453

#### 1454 **3.4.6.3 Runtime Scenario communication**

1455 Based on the Initial Scenario communication, the Runtime Scenario communication provides updates  
1456 during runtime.

1457 If one of the referenced server Functions' data change, the server SHALL submit the change as shown  
1458 in the following figure:

1459

1460 *Figure 21: Scenario 6 - Runtime Scenario communication sequence diagram*

1461 Note: Normally, in this Scenario only the "measurementListData" Function changes during runtime.  
 1462 Hence, usually no notifications of the other Functions of this Scenario are sent during runtime.

1463 Partial notifications without Selectors or Elements SHALL be supported for all Functions used in this  
 1464 Scenario.

1465 For measurementDescriptionListData notify, measurementConstraintsListData notify and  
 1466 measurementListData notify "partial" delete notifications SHOULD be supported with the Selector:

1467 - measurementId

1468 For electricalConnectionParameterDescriptionListData notify "partial" delete notifications SHOULD  
 1469 be supported with the Selectors:

1470 - electricalConnectionId

1471 - parameterId

1472 - measurementId

1473 Note: To interpret partial notification messages correctly the information obtained during the Initial  
 1474 Scenario communication phase is required.

1475 Note: A read operation ("polling") on all Functions is possible at any time, e.g. if a notification could  
1476 not be evaluated.

1477

1478 The following table shows where the required content of the messages of the sequence diagram is  
1479 described:

| Message name from sequence diagram                      | Content description in table | Scenario number in table |
|---|------------------------------|--------------------------|
| measurementDescriptionListData notify                   | Table 19                     | 6                        |
| measurementConstraintsListData notify                   | Table 20                     | 6                        |
| measurementListData notify                              | Table 21                     | 6                        |
| electricalConnectionParameterDescriptionListData notify | Table 23                     | 6                        |
| electricalConnectionDescriptionListData notify          | Table 22                     | 6                        |

1480 *Table 35: Runtime Scenario communication content references for Scenario 6*

1481

#### 1482 **3.4.6.4 Additional information**

1483 None.

1484

### 1485 **3.4.7 Scenario 7 - Monitor frequency**

#### 1486 **3.4.7.1 Pre-Scenario communication**

- 1487 1. **Detailed discovery:** Actors that act as client within this Scenario, need to know the addresses  
1488 of the server Features used in the Initial Scenario communication. If the address of a  
1489 particular server Feature is not known, the detailed discovery must be used, as described in  
1490 section 3.3.2.
- 1491 2. **Binding:** Binding SHOULD NOT be used for this Scenario.
- 1492 3. **Subscription:** Actors SHALL create a subscription for each server Feature that is relevant for  
1493 the corresponding Actor within this Scenario, as described in section 3.3.4.

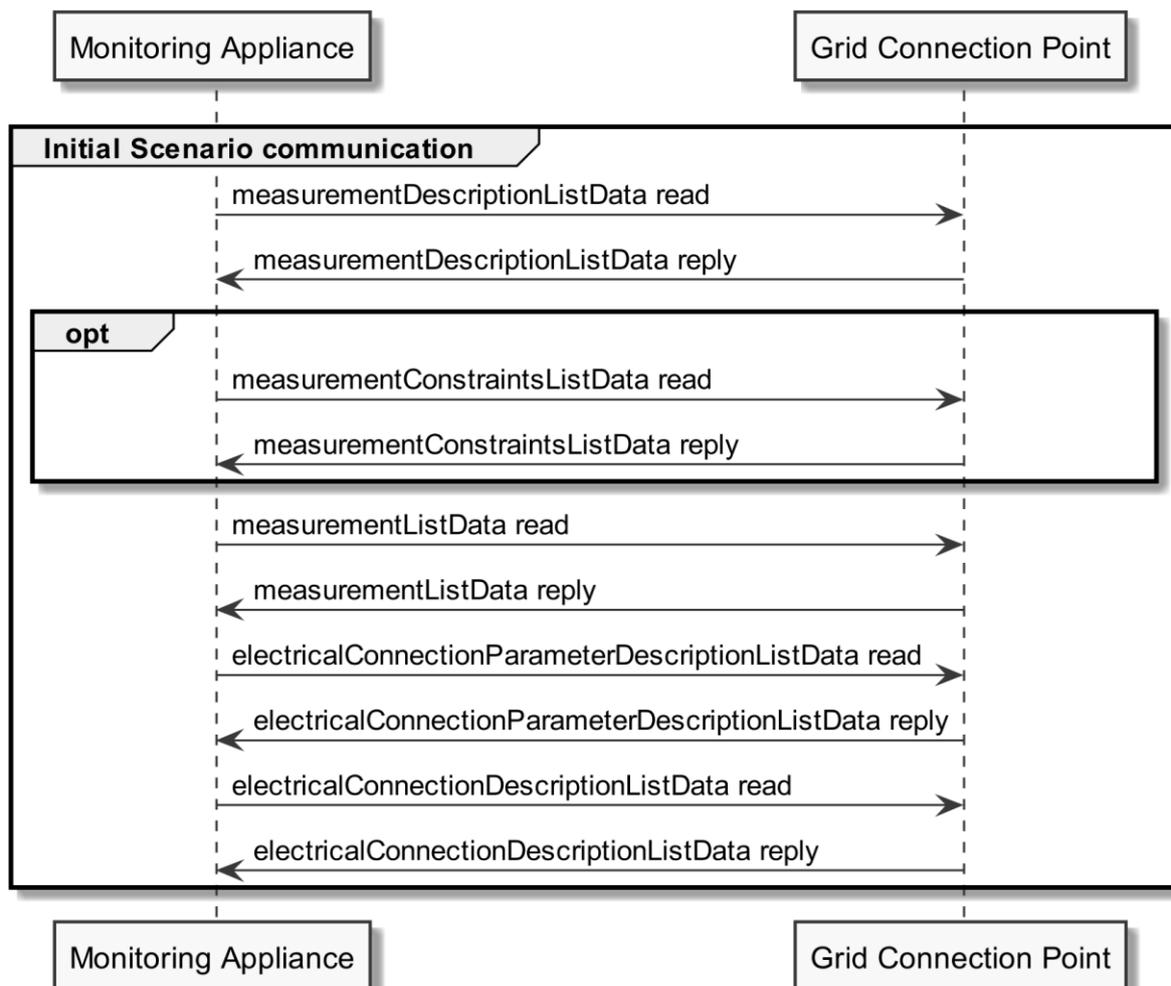

1494 The Initial Scenario communication SHALL start at the latest when the required resources on an Actor  
1495 are known and the necessary binding and subscription procedures have been finished. However, as  
1496 soon as the address of a required resource is known, the Initial Scenario communication for this  
1497 resource MAY start already, even if the addresses of other required resources are not known yet.

1498 If required resources are removed and added again, they are re-discovered, and the Initial Scenario  
1499 communication is triggered again for those resources.

1500

#### 1501 **3.4.7.2 Initial Scenario communication**

1502 Each time a (re-)connection is established, even if the Pre-Scenario communication phase is skipped,  
1503 the messages shown in the following sequence diagram SHALL be exchanged, as the corresponding  
1504 resources may have changed in the meantime:

1505

1506 *Figure 22: Scenario 7 - Initial Scenario communication sequence diagram*

1507 The `measurementDescriptionListData read` SHOULD be a "partial" read operation with the following  
 1508 Selector:

1509 - `scopeType = "acFrequency"`

1510 The `measurementConstraintsListData read`, `measurementListData read` and  
 1511 `electricalConnectionParameterDescriptionListData read` SHOULD be "partial" read operations with  
 1512 the following Selector:

1513 - `measurementId` (derived from the `measurementDescriptionListData reply`)

1514 The `electricalConnectionDescriptionListData read` SHOULD be a "partial" read operation with the  
 1515 following Selector:

1516 - `electricalConnectionId` (derived from the `electricalConnectionParameterDescriptionListData  
 1517 reply`)

1518 Note: If partial read is not supported, a full read SHALL be performed.

1519

1520 The following table shows where the required content of the messages from the sequence diagram is  
 1521 described:

| Message name from sequence diagram                     | Content description in table | Scenario number in table |
|--|------------------------------|--------------------------|
| measurementDescriptionListData reply                   | Table 19                     | 7                        |
| measurementConstraintsListData reply                   | Table 20                     | 7                        |
| measurementListData reply                              | Table 21                     | 7                        |
| electricalConnectionParameterDescriptionListData reply | Table 23                     | 7                        |
| electricalConnectionDescriptionListData reply          | Table 22                     | 7                        |

1522 *Table 36: Initial Scenario communication content references for Scenario 7*

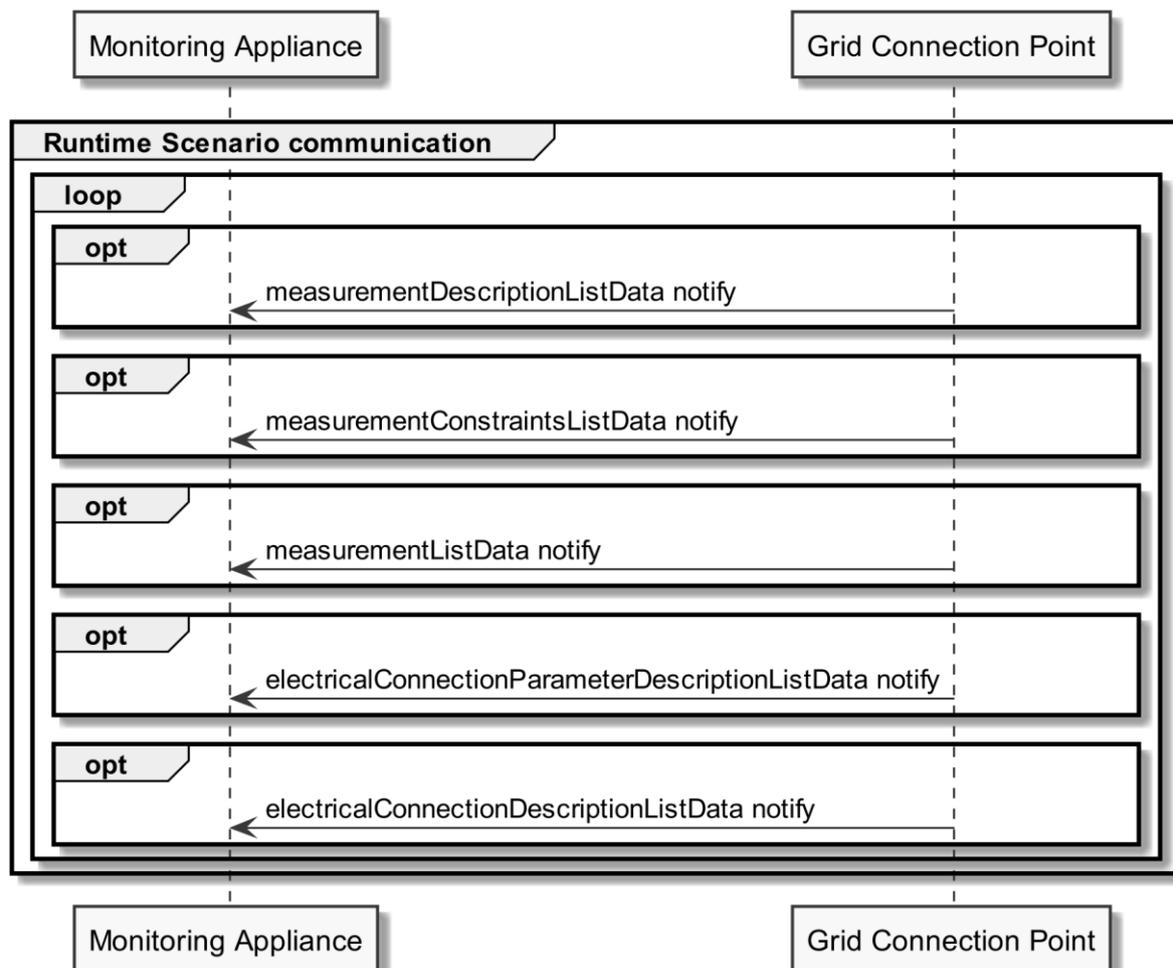

1523 Note: Within the Initial Scenario communication, the content required by this Scenario MAY not be  
 1524 provided completely, but later during Runtime Scenario communication.

1525

### 1526 **3.4.7.3 Runtime Scenario communication**

1527 Based on the Initial Scenario communication, the Runtime Scenario communication provides updates  
 1528 during runtime.

1529 If one of the referenced server Functions' data change, the server SHALL submit the change as shown  
 1530 in the following figure:

1531

1532 *Figure 23: Scenario 7 - Runtime Scenario communication sequence diagram*

1533 Note: Normally, in this Scenario only the "measurementListData" Function changes during runtime.  
 1534 Hence, usually no notifications of the other Functions of this Scenario are sent during runtime.

1535 Partial notifications without Selectors or Elements SHALL be supported for all Functions used in this  
 1536 Scenario.

1537 For measurementDescriptionListData notify, measurementConstraintsListData notify and  
 1538 measurementListData notify "partial" delete notifications SHOULD be supported with the Selector:

1539 - measurementId

1540 For electricalConnectionParameterDescriptionListData notify "partial" delete notifications SHOULD  
 1541 be supported with the Selectors:

1542 - electricalConnectionId

1543 - parameterId

1544 - measurementId

1545 Note: To interpret partial notification messages correctly the information obtained during the Initial  
 1546 Scenario communication phase is required.

1547 Note: A read operation ("polling") on all Functions is possible at any time, e.g. if a notification could  
 1548 not be evaluated.

1549

1550 The following table shows where the required content of the messages of the sequence diagram is  
 1551 described:

| Message name from sequence diagram                      | Content description in table | Scenario number in table |
|---|------------------------------|--------------------------|
| measurementDescriptionListData notify                   | Table 19                     | 7                        |
| measurementConstraintsListData notify                   | Table 20                     | 7                        |
| measurementListData notify                              | Table 21                     | 7                        |
| electricalConnectionParameterDescriptionListData notify | Table 23                     | 7                        |
| electricalConnectionDescriptionListData notify          | Table 22                     | 7                        |

1552 *Table 37: Runtime Scenario communication content references for Scenario 7*

1553

#### 1554 **3.4.7.4 Additional information**

1555 None.

1556
