

## Testscenario:

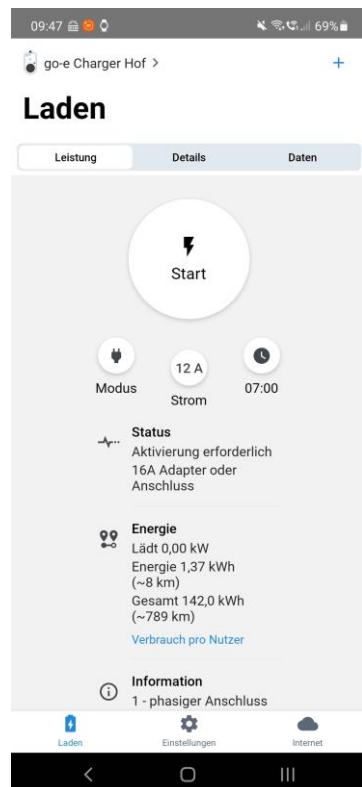

Laden solange, bis der Zählerstand des go-e Springt. Dann abstecken, damit die Ramdisk überschrieben wird. Anschließend nochmals 400Wh nachladen. Zählerstand go-e sollte gleich bleiben. Dann abstecken, um das Verhalten einer negativen Korrektur zu verifizieren.

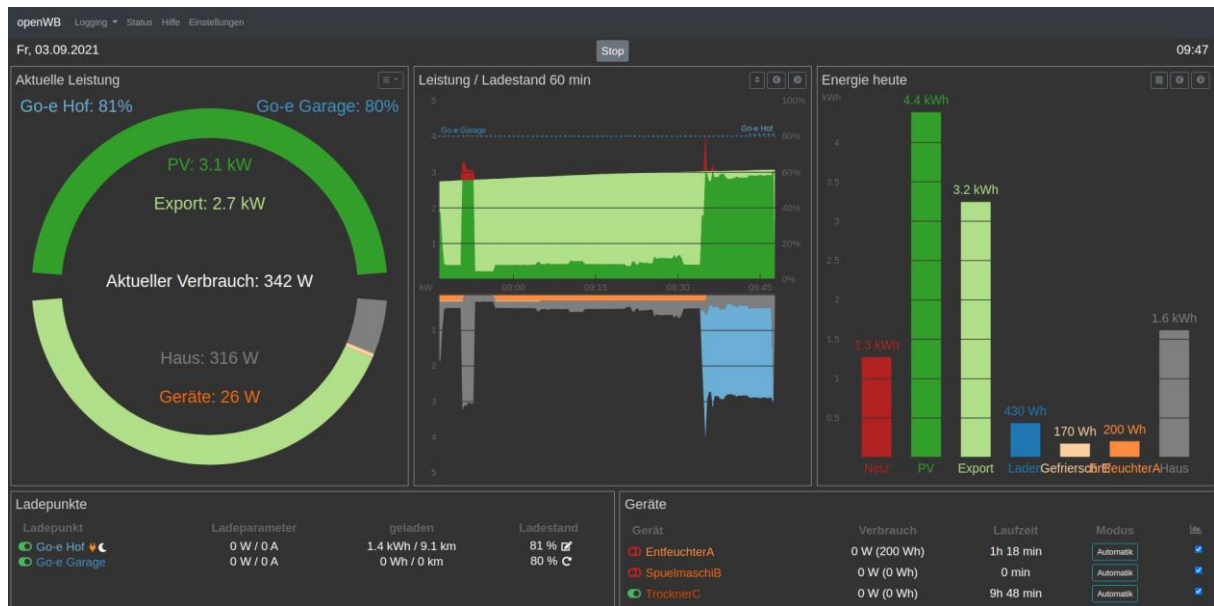

## Erstes laden

ramdisk/llkwh 141,376

Ich habe den Screen zu bald gemacht. Laden hätte hier 540Wh statt 430Wh sein müssen, war noch nicht aktualisiert.
